1. Plaintiff hereby brings this action against Defendant Facebook, Inc. (“Facebook”),
 2 individually and on behalf of a class of similarly situated persons, and alleges as follows:

3 SUMMARY OF THE ACTION

4. Facebook operates a website (www.facebook.com) and smartphone application
 5 (“app”) that allow Facebook users to connect with “friends.” With over 2.7 billion monthly
 6 active users, Facebook is the most popular social network worldwide. In the United States,
 7 Facebook accounts for over 45 percent of monthly social media visits. Moreover, Facebook
 8 Messenger, a standalone chat app in 2011, is one of the most popular mobile messenger apps
 9 worldwide.

10. Users do not pay a cash price to use Facebook. Instead, users exchange their time,
 11 attention, and personal data for access to Facebook’s services and this allows Facebook to profit
 12 greatly. Facebook’s source of profit is from selling ads –indeed in 2019 alone, Facebook
 13 collected \$70.7 billion in revenue, almost entirely from allowing companies to serve targeted ads
 14 to its users.

15. For almost a decade, Facebook has had monopoly power in the personal social
 16 networking market in the United States. Facebook illegally maintains this monopoly power by
 17 deploying a buy-or-bury strategy that thwarts competition and harms both users and advertisers.

18. Facebook’s illegal course of conduct has been driven, in part, by fear that the
 19 company has fallen behind in important new segments and that emerging firms were “building
 20 networks that were competitive with” Facebook’s and could be “very disruptive to” the
 21 company’s dominance. As Facebook’s founder and CEO, Mark Zuckerberg observed, “[o]ne
 22 thing about startups . . . is you can often acquire them,” indicating at other times that such
 23 acquisitions would enable Facebook to “build a competitive moat” or “neutralize a competitor.”
 24 Zuckerberg recognized early that even when these companies were not inclined to sell, if
 25 Facebook offered a “high enough price . . . they’d have to consider it.”

1 6. Facebook has coupled its acquisition strategy with exclusionary tactics that
 2 snuffed out competition. As a result, Facebook has chilled innovation, deterred investment, and
 3 forestalled competition in the markets in which it operates, and it continues to do so.

4 7. Facebook's unlawfully maintained monopoly power gives it wide latitude to set
 5 the terms for how its users' private information is collected, used, and protected. In addition,
 6 because Facebook decides how and whether the content shared by users is displayed to other
 7 users, Facebook's monopoly gives it significant control over how users engage with their closest
 8 connections and what content users see when they do. Because Facebook users essentially have
 9 nowhere else to go for this important service, the company is able to make decisions about how
 10 and whether to display content on the platform, and it can use the personal information it collects
 11 from users solely to further its business interests, free from competitive constraints, even where
 12 those choices conflict with the interests and preferences of Facebook users.

14 8. Facebook also uses its popularity and control it gained by consistently and
 15 intentionally deceiving its users about the data privacy protections it provided to its users to push
 16 this buy-or-bury business plan. Facebook exploited the rich data it deceptively extracted from its
 17 users to identify emerging competitors and then "acquire, copy, or kill" these firms. Rather than
 18 competing on the merits, Facebook used the valuable consumer data that it was harvesting to
 19 identify incipient competitors with the most likely path to meaningful market share gains.
 20 Equipped with the valuable user data it led its users to believe it was not gathering and would not
 21 use in this way, Facebook targeted its users' preferred alternatives for destruction. Facebook
 22 made clear that it would copy incipient competitors' innovations and discriminatorily shut off
 23 these firms' access to Facebook's valuable user data if they did not sell their businesses to
 24 Facebook first. The message to its competitors was explicit: sell at a bargain, or Facebook will
 25 go into "destroy mode." All of this was enabled by Facebook's deception.

1 9. Facebook's anticompetitive campaign to forestall competing services that might
 2 threaten its dominance in personal social networking services includes a variety of tactics.
 3 Facebook has intensively monitored the growth of scores of applications (or "apps") and
 4 purchased those it believed might threaten its monopoly power, sometimes snatching them from
 5 other firms in whose hands the acquired firms might flourish and become challengers to
 6 Facebook's dominant personal social networking service.

7 10. Two of Facebook's largest acquisitions, the mobile social photo app Instagram
 8 and the mobile messaging service WhatsApp, each posed a unique and dire threat to Facebook's
 9 monopoly. Each had enormous and rapidly growing user networks, and each was well positioned
 10 to encroach on Facebook's dominant market position. Facebook kept both services running after
 11 the acquisitions to fill the void, so they would not be replaced by another app with the potential
 12 to erode Facebook's dominance.

14 11. While Facebook's scheme—bolstered by its deception and its serial
 15 acquisitions—has allowed Facebook to evolve since Mark Zuckerberg founded the company in
 16 2004, the economic relationship between Facebook and its users has not. When users sign up for
 17 a Facebook account, they must agree to certain terms. Those terms lay out the economic
 18 exchange between Facebook and its users. Facebook's users give their personal data about
 19 themselves; Facebook allows users to access its social media network and pledges to protect
 20 users' privacy. Facebook's current Terms of Service state:

22 *Instead of paying to use Facebook and the other products and services we offer,
 23 by using the Facebook Products covered by these Terms, you agree that we can
 24 show you ads that businesses and organizations pay us to promote on and off the
 25 Facebook Company Products. We use your personal data, such as information
 26 about your activity and interests, to show you ads that are more relevant to you.*¹

27 ¹ *Facebook Terms of Service*, <https://www.facebook.com/terms.php> (last accessed December
 28 11, 2020).

1 Notably, Facebook suggests to the user (even to this day) that the extent to which it utilizes their
 2 data is limited, and that the extent of the data collection is limited to Facebook's services
 3 themselves.

4 12. The Terms of Service further state that "In exchange [for access to Facebook's
 5 services] we need you to make [certain] commitments." Among those "commitments" is
 6 "[p]ermission to use your name, profile picture, and information about your actions with ads and
 7 sponsored content." The Terms then state that protecting user "privacy is central to how
 8 [Facebook has] designed [its] ad system." In other words, users give up personal information
 9 and agree to receive targeted advertisements on the Facebook platform in exchange for access to
 10 Facebook's social media network and for a commitment from Facebook to protect user privacy.
 11 They do not agree to anything beyond that.

12 13. Facebook derives enormous economic value from the data it harvests from users
 13 on its platform. A recent majority staff report from the United States House of Representatives
 14 Antitrust Subcommittee explained that "[o]nline platforms rarely charge consumers a monetary
 15 price—products appear to be 'free' but are monetized through people's attention or with their
 16 data."² The same House Report recognizes the monstrous monetary value that Facebook reaps
 17 from the data that it extracts from its users.³

18 14. In fact, Facebook itself touts the economic value of the data it harvests from users.
 19 For example, Facebook describes its massive advertising earnings in terms of average revenue
 20

21
 22
 23
 24
 25 ² See *Investigation of Competition in Digital Markets*, Majority Staff Report and
 26 Recommendations ("House Report"), Subcommittee on Antitrust, Commercial, and
 27 Administrative Law of the Committee on the Judiciary, at 18 (emphasis added), October 6, 2020,
 28 available at <https://kl.link/3jGISfK>.

³ *Id.* at 18.

1 per user (“ARPU”) in its public filings. For 2019, Facebook’s ARPU was over \$41 per user in
 2 the United States and Canada.⁴

3 15. Facebook’s weaponization of user data and its strategy to “acquire, copy, or kill”
 4 competitors has been wildly successful at the expense of users. Facebook’s anticompetitive
 5 scheme has lessened, if not eliminated, competition and harmed users.

6 16. Facebook’s destruction of competition has caused consumers to suffer substantial
 7 economic injury. Consumers give up something of material value when agreeing to Facebook’s
 8 Terms of Service: their personal information and their attention. User information and attention
 9 is then sold in measurable units to advertisers in exchange for money. Consumers thus give up
 10 valuable consideration in using Facebook pursuant to Facebook’s Terms of Service. As
 11 Facebook’s co-founder explained, “[Facebook] is not actually free, and it certainly isn’t
 12 harmless. . . . We pay for Facebook with our data and our attention, and by either measure it
 13 doesn’t come cheap.”⁵

14 17. Absent Facebook’s anticompetitive scheme, fair competition would have required
 15 Facebook to provide consumers greater value in return for consumers’ data, but Facebook
 16 instead took that data without providing adequate compensation to its users (*i.e.*, the members of
 17 the putative class in this action). That constitutes antitrust injury. Through its deception and the
 18 acquisitions enabled by its deception, Facebook prevented competition on the merits, and as a
 19 result of that reduction in competition, users received less value for their data than they would
 20 have received in some form absent the reduction.

21

27 ⁵ Chris Hughes, *It’s Time to Break Up Facebook*, NY Times, May 9, 2019, available at
 28 <https://kl.link/3dUTshC>.

18. Facebook’s acquisition and maintenance of monopoly power continues to harm
1 consumers. Prior to Facebook’s consolidation of the Social Network and Social Media Markets,
2 a number of firms vigorously competed to win over consumers by offering competing products
3 which differed in non-price attributes such as quality. For instance, early social media
4 companies, including Facebook, competed for market share by offering competing products to
5 consumers that highlighted particular privacy features. Absent Facebook’s anticompetitive
6 scheme, which has allowed Facebook to place consumers under its monopolistic thumb,
7 competition from Facebook’s rivals would require Facebook to offer products of quality superior
8 to those it thrusts upon consumers today. Instead, Facebook’s anticompetitive conduct has
9 allowed Facebook to artificially stifle innovation and deprive consumers of any meaningful
10 alternative to Facebook’s social media empire. As such, consumers are faced with a “take it or
11 leave it choice” that provides no choice at all: accept a Facebook of lesser quality or forgo use of
12 the only social media platform used by most consumers’ friends and family members.
13
14

16 19. Facebook's monopolistic conduct violates the antitrust laws and harms
17 consumers. Facebook is dominant in the Social Network Market and the Social Media Market,
18 and has engaged in predatory and exclusionary conduct in order to monopolize, causing Plaintiff
19 and Class members to suffer substantial economic injury as a result of Facebook's competition-
20 reducing violations of law. This action seeks recovery for consumers' losses and Facebook's
21 unlawful gains, and it seeks other appropriate equitable relief to prevent Facebook from
22 continuing to destroy competition and harm consumers.

PARTIES

Plaintiff

26 20. Plaintiff Rachel Banks Kupcho is a natural person and citizen of the State of
27 Minnesota and a resident of Hennepin County. Plaintiff Banks Kupcho created a Facebook

account in approximately 2008, maintains an active account, and regularly uses Facebook.

Plaintiff Banks Kupcho actively uses her Instagram account, Facebook's Messenger feature, and her WhatsApp account.

21. Plaintiff Banks Kupcho cares about her online privacy and trusted Facebook to protect her privacy. But since the Cambridge Analytica scandal broke in 2018 and exposed Facebook's lack of privacy protections and subpar data privacy practices, she now questions Facebook's ability and intent to protect her online privacy. Plaintiff does not like the invasiveness of Facebook and its products. Despite this, Plaintiff Banks Kupcho continues to use Facebook and its products because virtually everyone she knows uses them and there are no other suitable alternatives to connect with her friends and family and social justice issues that matter to her. Additionally, during the current pandemic, connection via social media is important to Plaintiff Banks Kupcho since she can no longer socialize with people face-to- face.

22. Facebook lied and mislead its users about its data privacy practices and the scope of the data it collected and made available to third parties. If Plaintiff Banks Kupcho had known the truth about Facebook's privacy practices years ago, she would not have agreed to give Facebook such all-encompassing access to her personal data.

Defendant

23. Defendant Facebook, founded by Mark Zuckerberg in 2003, is a Delaware corporation with its principal place of business located in Menlo Park, California, where it owns and leases 3 million square feet of office buildings and 130 acres of land for future expansion.

24. Facebook is a social media company that provides online services to more than 3.14 billion users. Facebook owns and operates several business divisions, such as:

- Facebook. Facebook's core social media application, which bears the company's name, is, according to Facebook's filings with shareholders, designed to enable

“people to connect, share, discover, and communicate with each other on mobile devices and personal computers.” The Facebook core product contains a “News Feed” that displays an algorithmically ranked series of content and advertisements individualized for each person.

- Instagram. Instagram is a social media photo-sharing application that allows users to share photos, videos, and messages on mobile devices. Facebook acquired Instagram in April 2012.
 - Messenger. Facebook's Messenger application is a multimedia messaging application, allowing messages that include photos and videos to be sent from person to person across platforms and devices.
 - WhatsApp. WhatsApp is a secure messaging application used by individuals and businesses. Facebook acquired WhatsApp in 2014.

25. In exchange for providing services, Facebook collects user data, which it allows advertisers to use for targeted advertising to Facebook users. Facebook's principal revenue is from targeted social media advertising that it provides to advertisers as a data broker. In 2019, Facebook collected \$70.7 billion in revenue, almost entirely from allowing companies to serve ads to its users.

26. Facebook has over 50,000 employees and offices worldwide.

JURISDICTION, VENUE, AND CHOICE OF LAW

27. This action arises under Section 2 of the Sherman Antitrust Act, 15 U.S.C. § 2, and Section 4 of the Clayton Act, 15 U.S.C. § 15. The action seeks to recover treble damages or disgorgement of profits, interest, costs of suit, equitable relief, and reasonable attorneys' fees for damages to Plaintiff and members of the Class resulting from Defendant's restraints of trade and monopolization of the Social Network and Social Media Markets described herein.

1 28. This Court has subject matter jurisdiction under 28 U.S.C. §§ 1331 (federal
2 question), 1332 (class action diversity jurisdiction), and 1337(a) (antitrust); and under 15 U.S.C.
3 § 15 (antitrust). The Court also has subject matter jurisdiction over the state-law unjust
4 enrichment claims presented in this action under 28 U.S.C. 1367 (supplemental jurisdiction).

5 29. This Court has personal jurisdiction over Facebook because it is subject to general
6 jurisdiction in the State of California, where it maintains its headquarters and its principal place
7 of business, and Facebook's Terms provide that consumers must bring these claims in this Court.
8
9 The scheme to monopolize alleged in this Complaint caused injury to persons throughout the
10 United States, including in this District. Moreover, Facebook also conducted substantial
11 business from which the claims in this case arise in California and has agreed to personal
12 jurisdiction in this Court.

13 30. Venue is appropriate in this District under 15 U.S.C. § 15(a) (Clayton Act), 15
14 U.S.C. § 22 (nationwide venue for antitrust matters), and 28 U.S.C. § 1391(b) (general venue
15 provision). Facebook transacts business within this District, and it transacts its affairs and carries
16 out interstate trade and commerce, in substantial part, in this District.
17

18 31. Facebook’s “Terms of Service” provide that “the laws of the State of California,”
19 which includes the federal antitrust laws, govern the Terms and “any claim” between Facebook
20 and its users.⁶

INTRADISTRICT ASSIGNMENT

22 32. Under Civil Local Rule 3-2(c) and (e), this action is properly assigned to the San
23 Jose Division of this District because Facebook is headquartered here, and a substantial part of
24 the events or omissions that give rise to the claim occurred in San Mateo County.
25

⁶ Facebook Terms of Service, <https://www.facebook.com/terms.php> (last accessed: December 11, 2020).

FACTUAL ALLEGATIONS

General Background on the Social Media Industry

33. At a high level, the various participants in the social media industry include the
 4 following: social media platforms, consumers, advertisers, and content providers (which can be
 5 any of the previous three types of market participants, or can be third parties).

34. Social media platforms provide social networking, messaging, and/or media tools
 7 to consumers “designed to engage people by facilitating sharing, creating, and communicating
 8 content and information online.”⁷

35. Social media platforms typically allow users on their networks to interact with
 11 people the users know, participate in “groups” which join users with a particular background or
 12 common interest, and display content through linear feeds.⁸ Facebook’s social media platform—
 13 which allows users to interact with others, join and participate in groups, and displays content
 14 linearly—is pictured below:⁹

⁷ House Report, *supra*, at 88.

⁸ *Id.*

⁹ See Kessica Guynn, *Facebook is making a big change to your news feed*, USA TODAY, Jan. 11, 2018, available at <https://www.usatoday.com/story/tech/2018/01/11/facebook-newsfeed-big-change/1023331001/> (last accessed December 11, 2020).

1
2
3
4
5
6
7
8
9
10
11 36. A common feature of the social media industry is that social media platforms
12 typically offer their services to consumers for non-cash consideration.¹⁰ In consideration for
13 providing this service, social media platforms obtain valuable personal data from their users.
14
15 The extent of the information obtained from users varies by social media platform, as does the
16 disclosures about what data is obtained and the use(s) to which it is subsequently put.

17 37. Social media platforms monetize the data they obtain from users by selling the
18 data to third parties. As an example, advertisers often pay social media platforms for certain
19 aspects of the platform's user data, in order to learn more about the demographics that are most
20 interested in certain products. Advertisers, product manufacturers, and service providers also
21 often pay a social media platform to direct curated ads specifically towards particular user
22 segments. Similarly, application developers ("app developers") purchase users' data from social
23 media platforms to attract users that, in turn, brings profit to the developers in the forms of
24 application purchases and ad-revenue.

25
26
27
28 ¹⁰ House Report, *supra*, at 88.

1 ***General Background on Facebook***

2 38. Facebook's core offering to consumers is access to its social media network,
 3 which contains the individualized profiles of well over 200 million users in the United States and
 4 billions of users worldwide. In exchange for access to the only social media network that allows
 5 consumers to connect online with most of their family, friends, and acquaintances, Facebook
 6 requires users to provide their personal data and receive targeted advertisements.

7 39. The personal data and user attention that Facebook obtains from consumers in this
 8 exchange is not just the users' consideration paid to use Facebook products; they are what
 9 provides significant monetary value to Facebook's enterprise. Facebook uses the data obtained
 10 from its massive user base to generate its largest source of income: selling targeted
 11 advertisements to its users.

13 40. Facebook's machine learning algorithms mine patterns in the data for advertisers,
 14 which allows advertisers to reach precisely the right audience to convert into sales, user signups,
 15 or the generation of sales leads. To protect its exclusive control over user data and attention,
 16 Facebook has brought legal action against actors that have copied publicly available user data
 17 and made it available outside of Facebook.¹¹

19 41. The data is also monetized by commercializing access—for example, by
 20 providing application developers, content generators, and advertisers with direct access to the
 21 information embedded in Facebook's network, such as the interconnection between users, user
 22 attributes, and user behavior. That data can then be mined by these third parties.

24 42. From the beginning, Facebook has sought to entice consumers based on its
 25 supposed commitment to maintaining the privacy of its users' data. Unlike earlier competing

27 ¹¹ Facebook brought one such suit as recently as November 19, 2020. See Jessica Romero,
 28 *Combating Clone Sites*, Facebook Newsroom, Nov. 19, 2020, available at <https://about.fb.com/news/2020/11/combating-clone-sites/> (last accessed December 11, 2020).

1 social media platforms that allowed anyone interested to join anonymously or by using
 2 unverified usernames, Facebook required that those interested in joining to use their real-world
 3 identities.

4 43. This qualitative distinction had clear privacy implications. Ironically, early
 5 platforms that allowed users to register anonymously or with pseudonyms caused more privacy
 6 problems for users because wrongdoers that obtained and/or used fellow users' personal
 7 information could hide behind their online (anonymous or unverified) identities.
 8

9 44. In contrast, Facebook claimed that it created a level of accountability, because
 10 users ostensibly knew who was on the other side of the screen from them and were connected to
 11 them in some way in real life. Indeed, Facebook's website "was one of the first social networks
 12 where users actually identified themselves using their real names."¹² By making users "real,"
 13 Facebook claimed (and users agreed by voting with their feet) that their social interactions online
 14 were better protected and more meaningful. But all of this required Facebook to promise privacy
 15 protection in order to induce users to provide their real-world identities and data.
 16

17 45. Prior to founding Facebook, Mark Zuckerberg learned the importance of privacy
 18 to consumer preference early on. While a student at Harvard University, Mr. Zuckerberg created
 19 "Facemash," which "juxtaposed the pictures of two random Harvard undergraduates and asked
 20 users to judge their physical attractiveness."¹³ Notably, Facemash obtained the students' photos
 21 without their permission, "dr[a]w[ing] the ire of students and administrators alike[.]"¹⁴ While
 22
 23

24 ¹² See John Gallagher, Getting the Most Out of Information Systems § 8.3, available at
<https://kl.link/3dX3BKN> (last accessed December 11, 2020).

25 ¹³ Alan J. Tabak, *Hundreds Register for New Facebook Website*, The Harvard Crimson (Feb.
 26 9, 2004), available at <https://www.thecrimson.com/article/2004/2/9/hundreds-register-for-new-facebook-website/> (last accessed Dec. 11, 2020).

27 ¹⁴ *Id.*
 28

1 promoting “thefacebook.com,” Facebook’s predecessor, Zuckerberg vowed that he had learned
 2 from his experience with Facemash, building into “thefacebook.com” “intensive privacy
 3 options,” which “he hoped would help to restore his reputation[.]”¹⁵ In reality,
 4 thefacebook.com’s—and later Facebook’s—representations regarding privacy were part of an
 5 orchestrated scheme, designed to secure and prolong its monopoly status.

6 46. At first, Facebook was closed to all but those users who could validate their own
 7 real-world identities, such as by verifying that he or she was legitimate via an e-mail address
 8 issued by an organization, such as a university or a firm:¹⁶

9 It was this “realness” that became Facebook’s distinguishing feature—bringing
 10 along with it – and also depending on – a perceived degree of safety and comfort
 11 that enabled Facebook to become a true social utility and build out a solid social
 12 graph consisting of verified relationships. Since “friending” (which is a link
 13 between nodes in the social graph) required both users to approve the relationship,
 14 the network fostered an incredible amount of trust. Today, many Facebook users
 post their cell phone numbers and their birthdays, offer personal photos, and
 otherwise share information they’d never do outside their circle of friends.

15 47. The data Facebook has since collected derives much of its value from the ability
 16 to identify Facebook’s users by their real-world identity. Other platforms, such as Twitter, have
 17 only loosely enforced identity rules, and have never required users to disclose granular details
 18 about themselves.

19 48. Facebook characterizes each user’s disclosure of his or her identity as increasing
 20 the value of the experience for all users, who are purportedly able to benefit from others’
 21 disclosures by connecting with and following the activities of their real-world connections.¹⁷

24 ¹⁵ *Id.*

25 ¹⁶ Gallagher, *supra*, § 8.3.

26 ¹⁷ Apple’s Senior Director for Global Privacy recently expressed skepticism that social media
 27 platforms such as Facebook encourage disclosure of personal information solely to create a
 richer “personalized experience” for other users. See Apple Privacy Letter, November 19, 2020,
 28 available at <https://kl.link/33bhK2Y> (“What some companies call ‘personalized experiences’ are

1 Disclosure also increases the market value of the information Facebook obtains from its users.
 2 Knowing the internet habits of “YankeesFan123” is less valuable than knowing the browsing
 3 habits of a specific individual whose love of the Yankees can be linked with information about
 4 his shopping habits, income, family, friends, travel, dining, dating, and a myriad of other data
 5 points.

6 49. In the years since its inception, Facebook has tracked trillions of data points about
 7 consumers with a powerful data structure that it calls the “social graph.” The social graph
 8 concept “refers to Facebook’s ability to collect, express, and leverage the connections between
 9 the site’s users, or as some describe it, ‘the global mapping of everyone and how they’re
 10 related.’”¹⁸ All of the data on Facebook can be thought of as a “node” or “endpoint” that is
 11 connected to other data on Facebook:

12 You’re connected to other users (your friends), photos about you are tagged,
 13 comments you’ve posted carry your name, you’re a member of groups, you’re
 14 connected to applications you’ve installed—Facebook links them all.¹⁹

15 50. Given Facebook’s size and reach, as well as the extent of its surreptitious user
 16 data collection (discussed further below) the social graph is a unique and uniquely valuable
 17 dataset, even among the giants of the tech world. Much of this value stems from the fact that the
 18 majority of Facebook’s social graph cannot be viewed by the public or search engines, and
 19 because it contains extraordinary amounts of data that users unwittingly provided Facebook
 20 regarding their most minute everyday habits.

21
 22
 23
 24
 25 often veiled attempts to gather as much data as possible about individuals, build extensive
 26 profiles on them, and then monetize those profiles.”).

27 ¹⁸ Gallagher, *supra*, (quoting A. Iskold, “Social Graph: Concepts and Issues,”
 28 ReadWriteWeb, September 12, 2007).

29 ¹⁹ *Id.* (citing A. Zeichick, “How Facebook Works,” Technology Review, July/August 2008).

1 51. Facebook is a so-called “walled garden”—a closed ecosystem run by a single
 2 operator. Advertisers must go through Facebook in order to reach Facebook users. And
 3 Facebook can decide how much of its social graph it allows app developers, including
 4 competitors, to access.

5 52. The personal data of Facebook’s users takes many forms including data about the
 6 information users share on their personal profile pages, the photos and profiles users have
 7 viewed, what information users share with others, and even what users put in messages to other
 8 users. This granular data all allow targeted advertising on a scale that has never before existed.
 9 Facebook’s platform allows advertisers to target Facebook’s user base by their attributes and
 10 behavior. Third party advertisers have been able to use Facebook’s advertising platform to track
 11 and target consumers all throughout the internet, even when Facebook users are “logged-out” of
 12 Facebook.
 13

Facebook is Dominant in the Social Network and Social Media Relevant Markets.

14 53. There are two relevant markets applicable to this dispute. They are: (1) “the
 15 Social Network Market”; and (2) “the Social Media Market.” Facebook has unlawfully acquired
 16 and maintained monopoly power in both markets.

The Social Network Market

17 54. The Social Network Market is the product market consisting of social networks,
 18 which are websites (and accompanying mobile applications) that: (1) facilitate users of a given
 19 network finding, interacting, and networking with other people either whom the users already
 20 know or to whom they are connected through others they already know online; and (2) provide
 21 users with additional substantive features beyond the ability to communicate with other users and
 22 share multimedia. As explained more fully below, the definitions of the Social Media and Social
 23 Network Markets are distinct, although Social Networks may offer Social Media platforms on
 24
 25
 26
 27
 28

1 their networks (as Facebook, for example, does).²⁰ To that extent, the Social Network Market is
 2 a distinct part or sub-part of the Social Media Market.

3 55. Search engines, such as Google, Yahoo, or Bing, are not “social networks”
 4 because they do not provide for interaction between platform members. Similarly, apps like
 5 Apple’s “iMessage,” which simply allow the sharing of messaging media, such as emails or text
 6 messages, are not social networks because, although they provide for interaction, they do so only
 7 in a device-to-device manner and focus solely on delivering messages rather than facilitating a
 8 broader online social experience. Facebook itself has noted this distinction, explaining in
 9 documents provided to the House Antitrust Subcommittee that whereas the growth of Apple’s
 10 iMessage is “limited by the adoption of iPhones, . . . Facebook’s products can be used across
 11 devices.”²¹

13 56. Still other types of online networks, such as LinkedIn, are not “social networks,”
 14 as that term is defined in this complaint, because they are used for a different purpose, and are
 15 used in parallel to—rather than instead of—Social Networks. Whereas LinkedIn is typically
 16 considered the dominant professional social network in the world, it is not a replacement for
 17 Facebook. This is because LinkedIn is used primarily for professional networking and
 18 employment-seeking purposes, while Facebook and its like are used primarily for non-
 19 professional, personal purposes.²² The European Commission explained this distinction during
 20

22 ²⁰ The House Antitrust Subcommittee has recognized the Social Network Market as a
 23 relevant market that is distinct from the broader Social Media Market. *See House Report, supra,*
 24 at 90–91.

25 ²¹ House Report, *supra*, at 136 n.752.

26 ²² Facebook has itself recognized this distinction in documents it provided to the House
 27 Antitrust Subcommittee. *See id.* at 133–34 n.733 (“Linkedin . . . coexist[s] in the US with similar
 28 user bases but orthogonal graphs: Facebook connects friends and family, LinkedIn connects
 cowokers[.]”).

1 its review of the Microsoft/LinkedIn merger: “the reasons for using a [professional service
 2 network] are different from those for using a personal social network. While the former is used
 3 to ‘1. *Maintain professional identity*, 2. *Make useful contacts*, 3. *Search for opportunities*, 4.
 4 *Stay in touch*’, the latter is used to ‘1. *Socialize*, 2. *Stay in touch*, 3. *Be entertained*, 4. *Kill
 5 time*.’”²³ Thus, users will have *both* a LinkedIn and Facebook account, not one or the other, and
 6 this other type of network is not viewed or treated as a substitute for a Social Network.²⁴

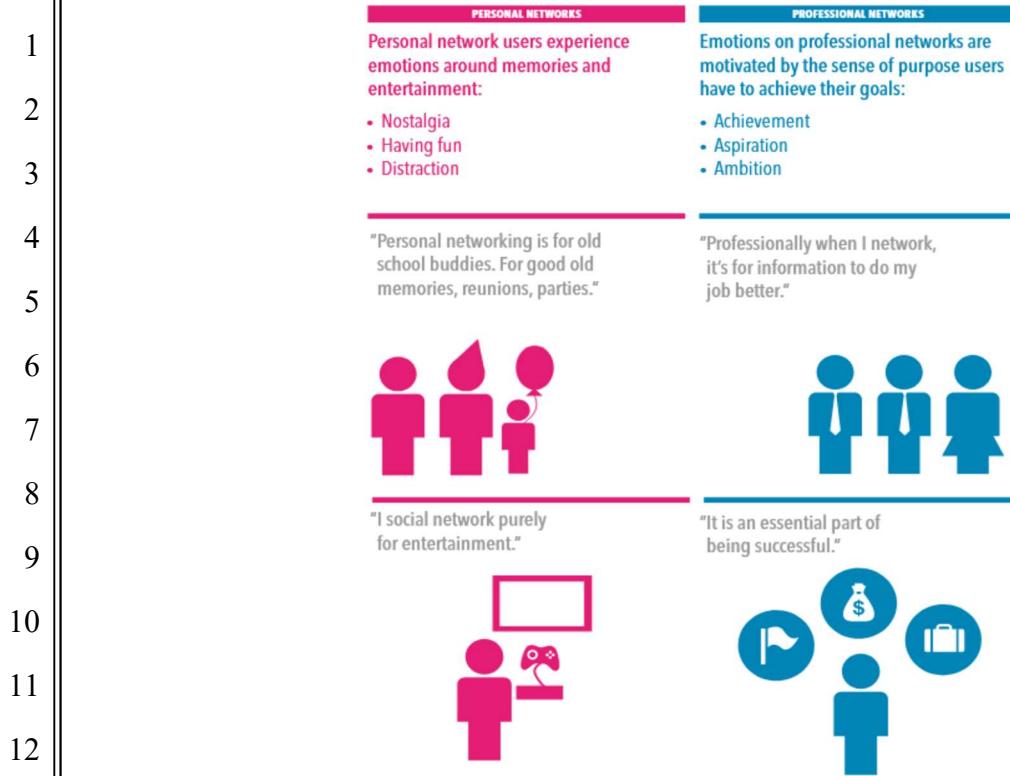

7 57. LinkedIn itself has recognized Social Networks are a distinct product.²⁵ It has, for
 8 example, explained the differences between “personal networks” and “professional networks.”²⁶
 9

20 23 European Commission, *Case M.8124 – Microsoft/LinkedIn* (June 12, 2016) at ¶ 106,
 21 available at https://ec.europa.eu/competition/mergers/cases/decisions/m8124_1349_5.pdf (last
 22 accessed Dec. 11, 2020) (emphases in original).

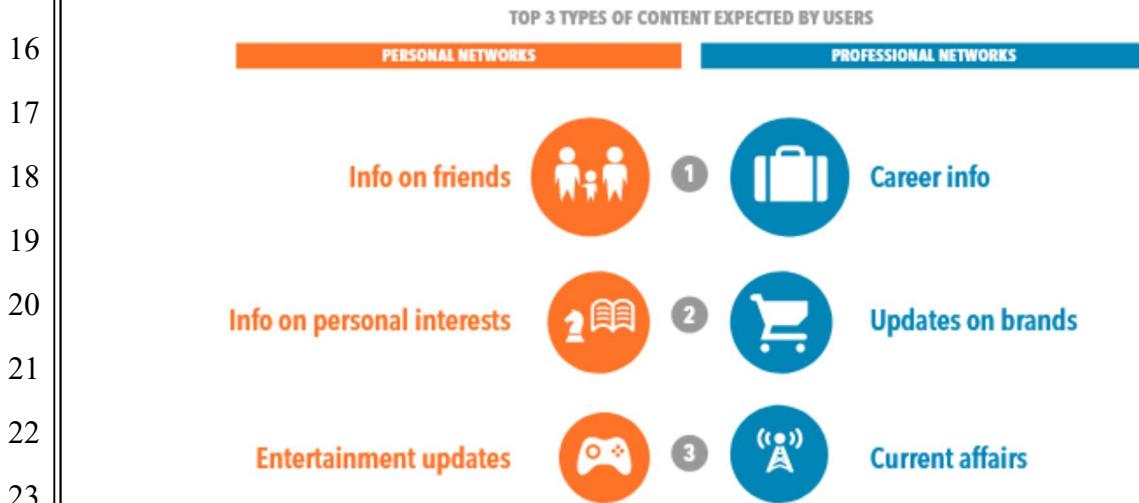

23 24 In addition to recognizing LinkedIn’s distinct professional networking purpose, the House
 24 Antitrust Subcommittee’s recent report also distinguished LinkedIn from social networks, like
 25 Facebook, on the basis of LinkedIn’s economic model. Whereas users pay for social networks
 26 like Facebook with their data, time, and attention, some features of LinkedIn, such as “LinkedIn
 27 Premium,” further require users to pay a monetary fee. See House Report, *supra*, at 88.

28 25 See LinkedIn, *The Mindset Divide* (Sept. 2012), available at
 29 https://business.linkedin.com/content/dam/business/marketing-solutions/global/en_US/site/pdf/wp/linkedin-marketing-solutions-mindset-divide.pdf (last accessed Dec. 11, 2020).

26 26 *Id.* at 4.

58. Similarly, LinkedIn has recognized the distinct content that Social Network users expect to see when visiting a given social network:²⁷

59. There are no reasonable substitutes for Social Networks. Social Media platforms, such as YouTube and TikTok, primarily exist to allow users to stream, share, and view content.

27 *Id.* at 6.

1 By contrast, firms in the Social Network Market provide users of a particular network an online
 2 community that brings together users who specifically choose to associate with one another. In
 3 addition, Social Networks, such as Facebook, provide a “rich social experience” to users through
 4 specific product features.²⁸ Social Media platforms, like YouTube and TikTok, do not provide
 5 or facilitate a similar use and instead offer only limited opportunities for social interaction, or
 6 interaction of a very different type that complements, rather than substitutes, for a social
 7 networking experience.

8 60. Beyond the “rich social experience” that Social Networks provide to users,
 9 consumers also use Social Networks for different purposes than other online social options, such
 10 as Social Media platforms. The House Antitrust Subcommittee, Germany’s Federal Cartel
 11 Office, and the United Kingdom’s Competition and Markets Authority have all recognized that
 12 “the specific demand for social networks is fundamentally different from the demand for other
 13 social media.”²⁹ That is because users utilize each for different purposes: Social Networks
 14 “facilitate their users finding, interacting, and networking with other people they already know
 15 online,” whereas Social Media platforms “principally facilitate the distribution and consumption
 16 of content” between “users with a wide range of relationships to the person posting, including by
 17 strangers.”³⁰ Thus, while a user might use YouTube to access and watch a complete stranger’s
 18 video—such as a cooking recipe—the same user would use Facebook, not YouTube, to share
 19 *that* video with the user’s friends, family, and real-world connections.³¹ Similarly, a user that

25 ³⁰ *Id.* at 91.

26 ³¹ See Administrative Proceedings, Bundeskartellamt, B6-22/16 (“German Federal Cartel
 27 Office Report”) ¶ 312 (February 2019), available at <https://kl.link/39AxErE> (“YouTube is hardly
 28 ever used for other purposes (e.g. contacts to friends, messaging, looking for people the user
 knows, share contents’)).

1 finds a funny video of a celebrity (or other stranger) on YouTube may choose to encourage their
 2 friends and family to view that video by sharing it with them on Facebook with a note:³²

14 61. Additional factors make clear that Social Media platforms are used in parallel
 15 to—rather than instead of—Social Networks. For one, many consumers use both YouTube and
 16 Facebook, rather than one over the other.³³ Social Media platforms make it easy for a user to
 17 share the content he or she finds on a Social Media platform using his or her Social Network
 18 account. By clicking the “SHARE” button that appears underneath a video on YouTube, for
 19 example, YouTube pre-populates a hyperlink of the video that the user may then easily copy and
 20 paste on Facebook:³⁴

22
 23 ³² Meira Gebel, *How to post a YouTube video on Facebook in several different ways, using*
 24 *YouTube’s ‘Share’ feature*, Business Insider (Aug. 23, 2019), available at

 25 11, 2020).

26 ³³ Federal Cartel Office Report, *supra*, ¶ 318 (noting that “Facebook.com and YouTube are
 27 increasingly used in parallel,” and that a “large number of [users utilize] YouTube without
 28 registration and thus solely for viewing videos.”).

³⁴ Gebel, *supra*.

62. There is both indirect and direct evidence of Facebook's market power in the
 10 Social Network Market. Since its initial market entry, in which it competed with early social
 11 networking companies such as MySpace and Friendster (which subsequently shifted to a
 12 combined social network/social media strategy, same as Facebook), Facebook has become
 13 dominant. As opposed to its defunct early competitors, Facebook has over 2.7 billion users
 14 worldwide, which is 42% of the global population (excluding China), including over 200 million
 15 users in the United States.

16
 17
 18 63. As discussed more fully below, Facebook's market share in the Social Network
 19 Market is higher than its share in the Social Media Market. Moreover, share of consumer time
 20 on social networks is an accurate measure of a given network's market share,³⁵ and more than
 21 80% of the time that consumers in the United States spend using social networks is spent on
 22 Facebook and Instagram.³⁶ In addition to this demonstrably high market share, Facebook has
 23 held this dominant share for years with high barriers to new entry (discussed further below).

24
 25
 26 ³⁵ See Dina Srinivasan, *The Antitrust Case Against Facebook: A Monopolist's Journey*
 27 *Towards Pervasive Surveillance In Spite of Consumers' Preference for Privacy*, 16:1 Berkeley
 Bus. L. J. 39, 87 (2019).

28 ³⁶ *Id.* at 88.

1 There is a reason a movie about Facebook is entitled, “*The Social Network*”; Facebook is now
 2 far and away the dominant player in that market.

3 ***The Social Media Market***

4 64. The Social Media Market is the product market consisting of Social Media
 5 platforms and tools, which are websites and mobile applications that allow users of a given
 6 platform to communicate and deliver multimedia—such as text messages photos, videos, music,
 7 and internet links—to other users of the same platform.

8 65. Firms in the Social Media Market require users to provide some amount of
 9 personal data in order to become members of those firms’ platforms, which allows the user to
 10 utilize the platform’s online services. Search engines, such as Google, Yahoo, or Bing, are not
 11 “social media” because they do not provide for interaction between platform members.³⁷

12 66. Other forms of social interaction and online entertainment are not reasonable
 13 substitutes for Social Media platforms because of the unique characteristics a Social Media
 14 platform provides, and because user behavior clearly indicates that Social Media platforms are
 15 complements to such other types of experiences and options. As an example, Social Media
 16 platforms allow users of a given platform to find, interact, and network with other people online.
 17 Other platforms, such as online videogame platforms—like Sony’s PlayStation Network and
 18 Microsoft’s Xbox Live—allow users to play videogames with each other online in real-time.
 19 While Social Media platforms and online videogame platforms both allow their users to
 20 communicate with other users of the same given service, those interactions take place in different
 21 contexts and for different purposes.

22
 23
 24
 25
 26 ³⁷ Relatedly, the United States Department of Justice (“DOJ”) recently recognized that search
 27 engines are not “social media” in its recent antitrust complaint against Google. *See United*
 28 *States, et al., v. Google LLC*, 1:20-cv-03010 (D.D.C.), Dkt. 1, ¶ 90 (“[P]latforms . . . are not
 reasonable substitutes for general search services.”).

1 67. Videogame platform users may communicate on a videogame platform with the
 2 users with whom they are playing a game to tell them “pass the ball.” But that communication is
 3 simply to facilitate—and to complement—the videogame platform’s intended purpose: providing
 4 entertainment through the playing of videogames. By contrast, the central purpose of Social
 5 Media platforms *is* users interacting with each other and sharing aspects of their lives, both on-
 6 and offline, as part of the social media experience.³⁸ Thus, a video game player seeking to
 7 convert their gaming into a Social Media experience would livestream that gaming via a separate
 8 Social Media platform, like Facebook Live or Twitch, which shows that users of videogame
 9 platforms themselves do not consider videogame platforms a reasonable substitute for their
 10 social media accounts.

12 68. In addition, Social Media platforms offer an economic model that is distinct from
 13 the economic models employed by providers of other forms of social interaction and online
 14 entertainment. Social Media platforms require users to provide some amount of personal data in
 15 order to become members, which allows the user to utilize a given platform’s online services. By
 16 contrast, providers of social interaction and online entertainment may collect from users a per-
 17 use monetary fee or a regularly occurring (monthly or annual) fee, but users’ personal data is
 18 otherwise largely irrelevant to the transaction.

20 69. Facebook itself recognizes that Social Media is a distinct relevant market. For
 21 example, in an internal presentation prepared for Sheryl Sandberg, Facebook’s Chief Operating
 22 Officer, Facebook maintained that “[t]he industry consolidates as it matures” and that “Facebook
 23 is now 95% of all social media in the US[.]”³⁹

25
 26 ³⁸ Germany’s Federal Cartel Office has indicated that “entertainment only accounts for a
 27 small fraction of the applications for which Facebook.com is used.” German Federal Cartel
 28 Office Report, *supra*, ¶ 312.

³⁹ House Report, *supra*, at 138.

1 70. Direct evidence of Facebook’s monopoly power in the Social Media Market is
 2 bountiful. For example, in an internal presentation, Facebook noted that “[i]n every country
 3 we’ve tipped, we have maintained [market] penetration,” and it expressed skepticism that other
 4 firms could compete with Facebook.⁴⁰ Moreover, as detailed below, Facebook has the near-
 5 unfettered ability to exclude competition from the Social Media market, due to its unrivaled
 6 (although anticompetitively obtained) insight into Social Media users’ data and behavior, and its
 7 surreptitious insights into nascent competitors, which it has ruthlessly acquired or destroyed.
 8 Facebook has also proven due to its ubiquity and stranglehold on Social Media that it can control
 9 prices for users—in this case, the amount of data it obtains about users without their consent (*i.e.*,
 10 the price users “pay” to use Facebook)—with impunity. With nowhere else to go for Social
 11 Media, users largely must accede to Facebook’s outsized demands regarding access to, and use
 12 of, their data.

14 71. In addition to direct evidence, there is also irrefutable indirect evidence of
 15 Facebook’s market power in the Social Media Market, similar to the same evidence alleged
 16 above with respect to Facebook’s power in the Social Network Market (which is re-alleged here
 17 with respect to its Social Media services, which overlap with and are made available on the same
 18 Social Network platform Facebook provides). Facebook is by far the largest Social Media
 19 company. In the United States, Facebook’s products include three of the seven most popular
 20 mobile apps, measured by monthly active persons, reach, and percentage of daily and monthly
 21 active persons.⁴¹ Indeed, the House Antitrust Subcommittee’s recent report revealed that
 22 “[a]ccording to Facebook’s internal market data, its users spend significantly more time on its
 23

26 ⁴⁰ *Id.* at 139.

27 ⁴¹ *Id.* at 136.

1 family of products than on competing services.”⁴²

2 72. Firms in the Social Media Market generate virtually all of their value to
 3 shareholders in the form of advertising revenue. Social media companies allow advertisers to
 4 use data about a platform’s users in order to deliver targeted advertisements to consumers. In
 5 particular, Facebook’s anticompetitive conduct over the years has enabled it to build a network
 6 that derives its power and value directly from those users’ engagement with that network. The
 7 more data that consumers fed into Facebook’s social graph by communicating and interacting
 8 with each other, posting their pictures, and publishing their content, the more valuable the
 9 Facebook network became to third parties, who could advertise to Facebook’s users by targeting
 10 them using the very information they provided to Facebook’s network.

12 73. Facebook, Twitter, Snapchat, and other Social Media companies all compete for
 13 the attention and data of their users, which they then convert into revenue by selling advertising.
 14 Accordingly, one of the best available metrics of market share in the Social Media Market is
 15 advertising revenue.

17 74. As measured by advertising revenue, Facebook (including Instagram) has over
 18 85% of the U.S. market, with the second-place competitor, Twitter, claiming *less than 3.5%*
 19 market share. Notably, one or more of Facebook services are considered a “must have” for most
 20 Social Media users, whereas other Social Media platforms are not.⁴³ This means that most
 21 Social Media users that are members of competing Social Media platforms still have an account
 22 on a Facebook service (if not all of them), which further means that Facebook’s advertising
 23 revenues are a conservative estimate of its already obviously-dominant market share.

25 42 *Id.* at 137–38.

26 43 Salvador Rodriguez, *TikTok passes Instagram as second-most popular social app for U.S. Teens*, CNBC (Oct. 6, 2020), available at <https://www.cnbc.com/2020/10/06/tiktok-passes-instagram-as-second-most-popular-social-app-for-us-teens.html> (last accessed Dec. 11, 2020).

1 ***Relevant Geographic Market***

2 75. The United States is the relevant geographic scope of both the Social Media
 3 Market and the Social Network Market. Social media platforms each provide services to
 4 consumers throughout the United States, and these services do not differ by geographic area
 5 within the United States. For example, neither Facebook nor competing social media platforms,
 6 such as YouTube, limit the offering of their services to residents of San Jose, California, as
 7 opposed to residents of Little Rock, Arkansas. To the extent that Facebook has competitors in
 8 the United States in the Social Network Market, the same is true in the Social Network Market as
 9 well.

11 ***The Social Network and Social Media Markets Feature High Entry Barriers***

12 76. Facebook's monopoly is durable because it operates in an industry with strong
 13 network effects and high barriers to entry.⁴⁴ A network effect is the phenomenon by which the
 14 value or utility a user derives from a good or service depends on the number of users of the same
 15 good or service. Network effects may be either direct or indirect. Direct network effects arise
 16 where a product or service becomes more valuable to users as additional others use the product
 17 or service. Indirect network effects exist when greater use of a product or service incentivizes
 18 third parties in a different customer group to also engage with that product or service.

20 77. As an example of direct network effects, take, for instance, an instant messaging
 21 application. Even if a messaging application has the very best encryption technology, superior
 22 look and feel, and is easy and intuitive to use, the product is worth comparatively little to a user
 23 if few other users have downloaded it. Messaging is only valuable if you can send and receive
 24 messages with people of your choosing. The more users who download the application, the more
 25 valuable it becomes to each of them. The Social Network and Social Media Markets exhibit

27 28 ⁴⁴ See House Report at 37–45.

1 clear and obvious direct network effects: “no person wants to be on a social network without
 2 other users.”⁴⁵

3 78. The powerful direct network effects inherent in the Social Network and Social
 4 Media Markets made competition at the early stages *for* the field rather than *within* the field.⁴⁶
 5 The House Antitrust Subcommittee’s recent report recognized this point as it relates to
 6 Facebook, explaining that Facebook’s network effects are “very strong” and that “there are
 7 strong tipping points in the social networking market that create competition *for the market*,
 8 rather than competition within the market.”⁴⁷ A similar phenomenon has since made itself clear
 9 in the Social Media market, such that even when users’ preferences shift to non-Facebook
 10 options as their *favorite* (e.g., TikTok or Snap), they still engage most often with Facebook’s
 11 Social Media offerings (e.g., Instagram) because it is the dominant, “must have” Social Media
 12 app.⁴⁸

13 79. The content generated by Facebook’s user base reinforces also creates strong
 14 indirect network effects and, in turn, increases the value of the Facebook network to advertisers
 15 and Facebook itself. With each photograph, relationship status, check-in, or post by a Facebook
 16 user, the Facebook network became more valuable, not just as a means of communicating with
 17 directly connected acquaintances, but as a means of learning about more remotely connected
 18 ones. This feedback loop enabled Facebook to use its anticompetitive strategy of consumer
 19 deception and monopolistic merger conduct to achieve a scale—bolstered by revenue from third
 20
 21
 22
 23

24 ⁴⁵ *Id.* at 41.

25 ⁴⁶ *Id.*

26 ⁴⁷ *Id.* (emphasis added).

27 ⁴⁸ Salvador Rodriguez, *TikTok passes Instagram as second-most popular social app for U.S. Teens*, CNBC (Oct. 6, 2020), available at <https://www.cnbc.com/2020/10/06/tiktok-passes-instagram-as-second-most-popular-social-app-for-us-teens.html> (last accessed Dec. 11, 2020).

1 parties such as advertisers and app developers that were drawn to Facebook—which substantially
 2 foreclosed competition in the Social Network and Social Media Markets.

3 80. As a result of this economic reality, markets that exhibit strong network effects
 4 tend to be “sticky,” or accompanied by high switching costs. Once a significant number of users
 5 adopt a product, they will be reluctant to switch to even a superior competitive alternative,
 6 because the newer offering will not deliver as much value unless many other users make the
 7 switch simultaneously. This feature of network-effect markets produce a period of intense, early
 8 competition, after which a single, dominant player often becomes entrenched. Facebook itself
 9 suggested in an internal memorandum, with respect to social media platforms and networks,
 10 “either everyone uses them, or no-one uses them.”⁴⁹ A fair and level playing field during the
 11 initial phase of early competition is thus crucial to maximize consumer welfare, as is a level
 12 playing field if a new type of social media platform arises that threatens to supplant the old.
 13

14 81. Relatedly, high barriers to entry refer to fixed costs that a competitor must pay to
 15 enter a market that incumbent players need not incur. Switching costs impose a barrier to entry.
 16 To induce a user to adopt a new product in a market that has high switching costs, a competitor
 17 must incur not only the expense of building a superior product, but also the added compensation
 18 to defray a user’s cost of switching. An incumbent does not incur this added cost, retaining a cost
 19 advantage that is at least equal to the switching cost the competitor must absorb. Where
 20 switching costs are high, the incumbent’s competitive advantage is high as well.
 21

22 82. High switching costs in the Social Network and Social Media Markets have
 23 allowed Facebook to prolong its monopoly. As an example, Facebook users may be connected
 24 to one another exclusively through Facebook’s network, leaving Facebook as the only method
 25 for users to remain in contact with one another. Faced with the possibility of losing contact with
 26

27
 28 ⁴⁹ House Report, *supra*, at 141.

1 each other, Facebook users who *would* switch to another social media platform or network may
 2 choose not to do so because of these high switching costs.⁵⁰

3 83. Similarly, the lack of portability of Facebook users' data presents an additional
 4 switching cost. To illustrate, "a user may upload a variety of data to Facebook, including photos
 5 and personal information, but (by Facebook's design) may not be able to easily download the
 6 data and move it to another social media site; instead, the user would have to start from scratch,
 7 re-uploading her photos and re-entering her personal information to the new platform."⁵¹

8 84. Facebook's tentacle-like grasp on other social apps likewise presents yet another
 9 switching cost for consumers. For instance, users of the popular Spotify music streaming service
 10 frequently sign up for Spotify using their Facebook accounts.⁵² But users who enroll in Spotify
 11 using their Facebook accounts "can't disconnect it"—to use Spotify after leaving Facebook,
 12 users generally must set up new accounts on Spotify.⁵³ In doing so, they lose access to their
 13 previous playlists, listening histories, connections with other users on Spotify, and other data.⁵⁴
 14 This discourages would-be defectors from ultimately leaving Facebook.

15 85. Many monopolists who seek to deceive consumers and anticompetitively destroy
 16 competitors can often be disciplined by market forces. A battery manufacturer, for example, that
 17 lies about the longevity of its batteries might be able to charge an unjustified premium price for a
 18 time. But as soon as the manufacturer's deception is uncovered, consumers would quickly
 19 switch to a more fairly priced brand. However, the robust network effects present in the Social
 20 Network and Social Media Markets impeded market forces from overcoming Facebook's market

24 ⁵⁰ Srinivasan, *supra*, at 89.

25 ⁵¹ House Report, *supra*, at 42.

26 ⁵² *Id.* at 146.

27 ⁵³ *Id.*

28 ⁵⁴ *Id.*

1 power once Facebook had anticompetitively secured its dominance. Consumers who discovered
 2 in 2018 that Facebook had not actually been protecting their privacy as it promised could not
 3 easily switch to an alternative, because their friends and connections were all on Facebook.

4 86. In addition, the Social Network and Social Media Markets have high barriers to
 5 entry. Once a social media platform like Facebook has achieved dominant market share, the
 6 amount of capital investment that would be required to challenge Facebook's monopoly would
 7 be large. A potential competitor would not only have to build its own vast network with features
 8 Facebook does not offer, but would also have to pay users' switching costs on a massive scale.

9 87. Coupled with the network effects and high barriers to entry in the Social Network
 10 and Social Media Markets, Facebook's anticompetitive conduct allows it to extract
 11 supracompetitive rents from users in the form of personal data and attention and deliver
 12 minimum, suboptimal privacy protections and overall quality. Facebook has been able to reap
 13 supracompetitive profits from its anticompetitive conduct without the typical pressures of
 14 competition from existing competitors or new entrants. And Facebook has been able to control
 15 and increase the amount of consumer information and attention that it demands.

16 88. Internal documents show that Facebook has been keenly aware of these market
 17 features. An internal memorandum prepared in October 2018 by a senior data scientist and
 18 economist at Facebook recognized that the network effects of Facebook and its products are
 19 "very strong."⁵⁵ In a 2012 presentation, Facebook described its network effects as a "flywheel,"
 20 remarking that "[n]etwork effects make it very difficult to compete with us" and that its network
 21 effects get "stronger every day."⁵⁶ Similarly, Facebook's founder, Mark Zuckerberg, has made
 22
 23
 24

25
 26 ⁵⁵ *Id.* at 13, 13 n.14.
 27 ⁵⁶ *Id.*

1 clear Facebook's recognitions that "[t]here are network effects around social products"; there are
 2 "a finite number of different social mechanics to invent" and "being first is how you build a
 3 brand and a network effect."⁵⁷

4 89. Tellingly, Facebook's own documents show its awareness that due to strong
 5 network effects and market tipping, Facebook is much less concerned with competition from
 6 other social apps in the market like Snapchat or Twitter, than from competition within
 7 Facebook's *own* family of products—Facebook, Instagram, Messenger, and WhatsApp.⁵⁸ In the
 8 case of messaging apps, Facebook's documents show that network effects can be even more
 9 extreme. And because Facebook is not interoperable with other social networks, its users face
 10 high costs to switch to other platforms, locking them into Facebook's platform.

12 90. Facebook's awareness of these features of the Social Network and Social Media
 13 Markets shaped its competitive strategy. For example, a senior executive at the company
 14 described its acquisition strategy as a "land grab," while Zuckerberg has boasted that Facebook
 15 "can likely always just buy any competitive startups."⁵⁹ Documents show that Facebook saw
 16 Instagram and WhatsApp as maverick competitors and their acquisitions as a way to protect and
 17 strengthen the durability of Facebook's monopoly.⁶⁰

19 91. Facebook's anticompetitive conduct, described more fully below, combined with
 20 strong network effects and high barriers to entry, enabled it to obtain and maintain its monopoly
 21 over the Social Network and Social Media Markets in the United States. Indeed, the House
 22 Antitrust Subcommittee recently recognized that because of its anticompetitive conduct and
 23

1 strong network effects, “Facebook’s monopoly power is firmly entrenched and unlikely to be
 2 eroded by competitive pressures from new entrants or existing firms.”⁶¹

3 ***Facebook Has Attempted to Acquire Market Power (and Has Succeeded in Acquiring
 4 Market Power) by Deceiving Consumers about Its Privacy Practices.***

5 92. For years, Facebook has engaged in a pattern of deception about the amount of
 6 data it obtains and the extent of the data harvesting and use by third parties its platform has long
 7 enabled. Its deception has only recently begun to come to light.

8 93. Privacy practices were a crucial form of competition in the early days of the
 9 Social Network and Social Media Markets. After its founding in 2003, MySpace quickly
 10 dominated the Social Network and Social Media Markets. By 2006, MySpace supplanted
 11 Google as the most visited website in the United States.

12 94. Notably, MySpace offered an “open” platform, allowing *all* interested users to
 13 join MySpace. Moreover, MySpace users could sign up for MySpace using unverified usernames
 14 and pseudonyms.

15 95. By 2007, overwhelmingly negative headlines began drawing attention to
 16 MySpace’s lax privacy practices. In particular, users, parents, and critics alike attributed sexual
 17 assaults, suicides, and murders to MySpace, speculating that MySpace’s open platform—which
 18 cloaked wrongdoers with relative anonymity, an added-level of covert protection—triggered
 19 these events.

20 96. By this time, competitors to MySpace including Friendster, Orkut, Flip.com,
 21 Bebo, and Facebook had begun to emerge.

22 97. Given MySpace’s prominence in the Social Network and Social Media Markets,
 23 Facebook sought to differentiate itself from MySpace in order to entice users to join Facebook.

24 25 26 27 28 ⁶¹ *Id.* at 13.

1 Facebook initially distinguished itself on the basis of its strict privacy settings, including its
 2 closed-network approach. Importantly, Facebook promised users that it would disclose its
 3 “information and privacy practices” and that it would “not use cookies to collect private
 4 information from any user.”⁶²

5 98. In 2006, some 250 million people around the world used a social media platform:
 6 100 million used MySpace, 12 million used Facebook, and the remainder used a number of other
 7 competitors.⁶³ In 2007, user growth at MySpace began to come to a halt—by mid-2007,
 8 Facebook had begun to supplant MySpace as the most visited social media platform in the
 9 United States.⁶⁴

10 99. Facebook’s representations to consumers regarding its data policies were
 11 instrumental to Facebook’s gaining market share at the expense of its rivals, including MySpace.
 12 A 2004 consumer survey revealed that a majority of Americans indicated that privacy was a
 13 “really important issue that [they] care about often.”⁶⁵ Another study focused on early Facebook
 14 users’ attitudes towards privacy, finding that they cared more about privacy policy than about
 15 terrorism.⁶⁶ Individuals in academia compared Facebook users’ satisfaction with Facebook’s
 16 privacy settings to MySpace users’ satisfaction with MySpace’s privacy settings, concluding that
 17 users typically preferred Facebook’s settings over Myspace’s.⁶⁷

24 ⁶³ *Id.* at 54.

25 ⁶⁴ *Id.*

26 ⁶⁵ *Id.* at 52 (brackets in original) (internal citation omitted).

27 ⁶⁶ *Id.* (internal citation omitted).

28 ⁶⁷ *Id.*

1 100. Facebook itself recognized the importance that its supposed stringent privacy
 2 protections had in allowing Facebook to quickly amass dominance. In a November 2011 post on
 3 Facebook, Zuckerberg explained:

4 When I built the first version of Facebook, almost nobody I knew wanted a public
 5 page on the internet. That seemed scary. But as long as they could make their
 6 page private, they felt safe sharing with their friends online. Control was key.
 7 With Facebook, for the first time, people had the tools they needed to do this.
 8 That's how Facebook became the world's biggest community online.⁶⁸

9 101. To this day, consumers continue to care deeply about privacy. That is why many
 10 companies market their commitment to privacy as a selling point for their products and services.
 11 Apple, for instance, tells the public that "Apple believes that privacy is a fundamental human
 12 right" and that "[w]e share your belief that customers should have control over their data."⁶⁹

13 102. Despite Facebook's representations about its superior data privacy practices,
 14 Facebook spent the next fifteen years deceiving consumers about the lackluster data privacy
 15 protections that it provided to users in exchange for their data. When the scope of commercial
 16 surveillance, and the harvesting and use of user data, that Facebook's data-brokering practices
 17 enabled was first revealed in 2018, following news coverage about the Cambridge Analytica
 18 scandal, Facebook had already achieved a monopoly in the Social Network and Social Media
 19 Markets in the United States.

20 103. Publicly, Facebook sought to differentiate itself by offering superior privacy
 21 protections. But behind the scenes—and entrenched in a market which provided additional
 22 protections to Facebook's monopoly in the forms of powerful network effects, high switching
 23 costs, and other significant entry barriers—Facebook created a commercial surveillance

28 ⁶⁹ Apple Privacy Letter, *supra*.

1 infrastructure that enabled it to dominate its competitors. This would not have been possible if
 2 Facebook had not deceived consumers about its data privacy and commercial surveillance
 3 practices.

4 104. In 2006, Facebook introduced News Feed. The curated feed was intended as a
 5 central destination so users did not have to browse through friends' profiles for updates. About
 6 one million users joined a "Facebook News Feed protest group," arguing the feature was too
 7 intrusive.⁷⁰

8 105. Facebook initially brushed off the criticism, but after continued outcry, it
 9 instituted what it claimed were enhanced privacy settings that purportedly allowed users greater
 10 ability to keep their activities private.⁷¹ For example, Facebook maintained that it would give
 11 users the options to block certain information—such as when a user removes profile information,
 12 posts on a Facebook Wall, comments on a photo, adds a friend, removes a relationship status, or
 13 leaves a group—from appearing on other users' News Feeds.⁷² In announcing these updates,
 14 Facebook publicly assured users that "industry-leading privacy restrictions . . . have made
 15 Facebook a trusted site for sharing information."⁷³

16 106. Despite claiming to provide users with enhanced privacy protections, however,
 17 Facebook increasingly made user content and information available to advertisers without
 18 disclosure to users. Facebook's unrelenting deception of its users allowed Facebook to continue

26 ⁷² *Id.*

27 ⁷³ *Id.*

1 to amass market share in the Social Network and Social Media Markets.

2 107. Beginning in 2007, Facebook gave app developers access to user content and
 3 information, encouraging them to build apps to stimulate user engagement. Facebook paid these
 4 app developers not with cash, but with user content and data, including content marked private.⁷⁴
 5 As Facebook attempted “to become the world’s dominant social media service, it struck
 6 agreements allowing phone and other device makers access to vast amounts of its users’ personal
 7 information.”⁷⁵

8 108. Facebook did not disclose to its users the scope of the content and data that
 9 Facebook began providing to third parties at that early date, including user data marked
 10 “private.” But Facebook explained to third-party app developers in May 2007 that Facebook’s
 11 core value proposition and business model was “providing access to a new kind of data—social
 12 data, which enables you to build applications that are relevant to users.” With respect to that
 13 social media data, Facebook told developers: “You are on a level playing field with us. You can
 14 build robust apps, not just widgets. Complete integration into the Facebook site.”

15 109. Also in 2007, under the guise of “social advertisement,” Facebook introduced its
 16 “Beacon” product. Beacon allowed participating third parties to track users’ purchases outside
 17 Facebook and notify their Facebook friends.⁷⁶ As an illustration, when a Facebook user rented a
 18 movie from Blockbuster, the user would immediately receive a “pop-up” notification from
 19

1 Blockbuster requesting permission to share details regarding the user's movie rental with
 2 Facebook.⁷⁷ Unless the user expressly declined permission by selecting the "No, Thanks"
 3 option, Facebook would receive information about the user's rental activity and publish that
 4 information on the user's Facebook page.⁷⁸ An example of a Beacon pop-up request displayed to
 5 Facebook users on third-party sites is pictured below:⁷⁹

6

12
 13 110. Many of Facebook's representations regarding its Beacon program were
 14 subsequently proven to be untrue. Facebook initially maintained that Beacon only tracked and
 15 maintained the activity of users that consented when prompted by the pop-up seeking
 16 permission.⁸⁰ In reality, however, Beacon allowed Facebook to track the activity of even those
 17 users that clicked the "No, Thanks" prompt.⁸¹

18
 19 111. The Federal Trade Commission ("FTC") expressed concern about Facebook's
 20 Beacon program, and public outrage and litigation ensued.⁸² Zuckerberg ultimately apologized,
 21 let users opt out, and called Beacon a mistake, the implication being that Facebook had learned

1 its lesson and was now publicly reassuring users that it would not, in fact, use their data in
 2 unauthorized or intrusive ways.

3 112. As of the third quarter of 2008, Facebook had around 100 million monthly active
 4 users worldwide.⁸³ This placed it just behind MySpace, which had more than 110 million
 5 monthly active users.⁸⁴ Facebook passed MySpace in terms of monthly active users in the United
 6 States in 2009. MySpace never came close to Facebook again, although it continued to exist as a
 7 competitor through 2014.

8 113. By 2010, bolstered as it was by its ostensible commitment to privacy, Facebook
 9 had become the largest social media company in the world and, unknown to nearly all of its
 10 users, had transitioned its entire business to selling social media data, which it did by selling
 11 access to developers and selling advertisements targeting Facebook's network of engaged and
 12 active users. In March 2010, it was reported that Facebook had booked revenues of up to \$700
 13 million in 2009 and was on track for \$1.1 billion in 2010—almost all from advertising to its
 14 users. Facebook had been roughly doubling its revenues every year up until that point—\$150
 15 million in 2007; nearly \$300 million in 2008; and \$700 million in 2009.

16 114. In early 2010, Facebook launched its “Like” button, which is also referred to as a
 17 “Social Plugin.” The “Like” button is a web plug-in that appears on a third party’s website. If a
 18 user supports or “likes” a particular piece of content on a third party’s website—such as a
 19 particular news article—a number ticker besides the “Like” button increases by one. A preview
 20 of the content that the Facebook user “liked” on a third party’s website may appear to the user’s

1 followers on Facebook in the user's News Feed, potentially drawing additional viewers to visit
 2 the third-party website after observing the previewed content in the user's News Feed. A version
 3 of Facebook's "Like" button that appears on third-party websites is pictured below:⁸⁵

7 115. Marketed as a way to share opinions, the Like button in reality enabled Facebook
 8 to obtain consumer data by tracking activity across the internet. At the time that Facebook
 9 launched its "Like" button, Facebook's "Frequently Asked Questions" page indicated that "No
 10 data is shared about you when you see a social plug-in on an external website."⁸⁶ Independent
 11 researchers subsequently determined, however, that the presence of the "Like" button on third-
 12 party websites allowed Facebook to monitor users and obtain their data anytime users visited
 13 those third-party websites, even when users did *not* click the "Like" button.⁸⁷

15 116. Investigators soon uncovered this deception, and Facebook settled with the FTC
 16 to resolve the agency's charges that "Facebook deceived consumers by telling them they could
 17 keep their information on Facebook private, and then repeatedly allowing it to be shared and
 18 made public."⁸⁸ Facebook's settlement with the FTC barred Facebook from making any further

26 ⁸⁸ Press Release, Federal Trade Commission, Facebook Settles FTC Charges That It
 27 Deceived Consumers By Failing To Keep Privacy Promises, Nov. 29, 2011, available at
<https://www.ftc.gov/news-events/press-releases/2011/11/facebook-settles-ftc-charges-it-deceived-consumers-failing-keep> (last accessed Dec. 11, 2020).

1 deceptive privacy claims, required Facebook to get consumers' approval before it changes the
 2 way it shared their data, and required Facebook to obtain periodic assessments of its privacy
 3 practices by independent, third-party auditors for the next 20 years. In particular, under the
 4 settlement, Facebook was specifically:

- 5 a) barred from making misrepresentations about the privacy or security of
 consumers' personal information;
- 6 b) required to obtain consumers' affirmative express consent before enacting
 changes that override their privacy preferences;
- 7 c) required to prevent anyone from accessing a user's material more than 30
 days after the user has deleted his or her account;
- 8 d) required to establish and maintain a comprehensive privacy program
 designed to address privacy risks associated with the development and management of new and
 existing products and services, and to protect the privacy and confidentiality of consumers'
 information; and
- 9 e) required, within 180 days, and every two years after that for the next 20
 years, to obtain independent, third-party audits certifying that it has a privacy program in place
 that meets or exceeds the requirements of the FTC order, and to ensure that the privacy of
 consumers' information is protected.⁸⁹

117. As another example of the promises that Facebook made—but subsequently did
 118 not keep—regarding its privacy protections, Facebook announced in 2012 that future privacy
 119 changes would require user approval through voting.⁹⁰ During a “privacy press conference,”
 120

25 89 *Id.*

26 90 Eyder Peralta, *Facebook Will Allow Users to Vote On Privacy Changes*, NPR (June 1,
 27 2012), available at <https://www.npr.org/sections/thetwo-way/2012/06/01/154162976/facebook-will-allow-users-to-vote-on-privacy-changes> (last accessed Dec. 11, 2020).

1 Facebook founder Mark Zuckerberg explained that Facebook is “one of the only services on the
 2 web where people are sharing pretty personal and intimate information”; that requiring users’
 3 approval for privacy changes “mak[es] it so that we can’t just put in a new terms of service
 4 without everyone’s permission”; and that “[w]e think these changes will increase the bonding
 5 and trust users place in the service.”⁹¹ But consistent with its pattern of deception, Facebook
 6 ultimately did not keep that commitment, choosing to end the process of requiring users’
 7 approval for future privacy changes.⁹²

8 118. Facebook’s continued promises regarding privacy negatively impacted potential
 9 rivals—even those backed by the largest companies in the world—from ever gaining appreciable
 10 market share. In 2010, Google launched a new product, Google+. Google+ was Google’s
 11 attempt to build out a “social graph” that would leverage a common user identity across Google
 12 products, including YouTube and Gmail.

13 119. With Google+, Google sought to replicate the essential product features and
 14 functionality of Facebook. The planned features for Google+ included a continuous scroll
 15 product called the “stream”; a companion feature called “sparks,” which related the “stream” to
 16 users’ individual interests; and a sharing app called “Circles” to share information with one’s
 17 friends, family, contacts, and the public at large.

18 120. Google+ represented a massive investment of resources to bring a finished, full-
 19 scale social-media network to market. Google conscripted almost all of the company’s products
 20 to help build Google+. At its peak, Google+ involved 1000 employees from divisions across the
 21
 22
 23
 24
 25

26 ⁹¹ Srinivasan, *supra*, at 61–62.

27 ⁹² Dave Lee, *Facebook criticised over decision to stop public privacy votes*, BBC News
 28 (Nov. 22, 2012), available at <https://www.bbc.com/news/technology-20444678> (last accessed Dec. 11, 2020).

country. Google even required employees to use the Google+ Hangouts video chat feature, which was supposed to help drive adoption in the tech industry and beyond.

3 121. Google's attempt to compete with Facebook, however, failed because it could not
4 attract the critical mass necessary to deliver a viable social network and therefore to overcome
5 the network-based switching costs Facebook enjoyed as a result of its deception.⁹³ Indeed,
6 Germany's Federal Cartel Office has attributed Google+'s difficulty in competing with Facebook
7 to network effects, which Facebook had built and continued to enjoy due to its
8 misrepresentations regarding the privacy protections its users supposedly enjoyed.⁹⁴
9
10 Accordingly, even though Google+ continued as a competitor until 2018, it was never able to
11 dethrone Facebook or even take appreciable market share away from Facebook, and all the while
12 Facebook continued to mislead users in order to prevent them from switching to a network that
13 offered similar features, but with better actual privacy practices.

122. In fact, Facebook’s deception about its data privacy practices and anticompetitive
15 string of acquisitions contributed to the rapid growth of Facebook’s ever-increasing user base
16 and increased the value of Facebook’s social graph. As Facebook’s VP of Product Management
17 explained to Mark Zuckerberg in an October 2012 email, the data that Facebook collects has
18 made Facebook progressively better at collecting and monetizing consumer data: “We know
19 more about what people want to see because people look at more stuff on our platform. . . . the
20 more people that use the system, the more information we have on how to make more people use
21 the system.”
22

⁹³ House Report, *supra*, at 89.

27 || ⁹⁴ *Id.* at 89 n. 460.

1 123. Facebook went public in 2012. In pursuit of revenue, Facebook began using
 2 “View Tags,” which allow advertisers to track Facebook users across the Internet using
 3 cookies.⁹⁵ Facebook also gave advertisers the ability to conduct more fine-grained bidding for
 4 advertising and to advertise specifically to a “custom audience”—*i.e.*, a list of specific users
 5 provided by the advertiser. Facebook did not disclose that its user data practices allowed third
 6 parties to track Facebook users across the internet using cookies.

7 124. At the time of Facebook’s 2012 IPO, its filings with the SEC indicated that the
 8 company had 845 million monthly active users and that its website featured 2.7 billion daily likes
 9 and comments.⁹⁶

10 125. Facebook later combined user content with other third-party data, thereby
 11 deanonymizing the third-party data. For example, in April 2013, Facebook created information
 12 dossiers on millions of users and nonusers alike. The dossiers included names, health
 13 information, information about neighbors, and proclivities. Facebook did not disclose the
 14 dossiers to users (or even the fact of the dossiers’ existence), using them instead to allow
 15 advertisers to target users with more precision.⁹⁷ Users were unaware of the extent of
 16 Facebook’s commercial surveillance and did not first begin to become aware until the news of
 17 the Cambridge Analytica scandal broke—in March 2018, the overwhelming majority of
 18 Facebook users incorrectly believed Facebook collected data only when logged in.⁹⁸

1 126. Facebook engaged in this continued pattern of deception with the specific intent
 2 to monopolize the Social Network and Social Media Markets and ultimately to maintain its
 3 monopoly. Facebook succeeded in deceiving consumers long enough to solidify its market
 4 power in the Social Network and Social Media Markets. By the time Facebook's deception
 5 about its lackluster data privacy practices was revealed in 2018—*i.e.*, the year Google+ left the
 6 market due to inability to grow—it had achieved unrivaled dominance.
 7

8 ***The Cambridge Analytica Scandal Partially Reveals the Extent of Facebook's
 Deception.***

9 127. It was not until the Cambridge Analytica scandal in 2018 that consumers began to
 10 fully discover the full scope and implications of Facebook's lax data privacy practices. In
 11 particular, the scandal revealed that Facebook had been giving app developers the ability to
 12 harvest Facebook users' private data without the users' consent, and to use that data for purposes
 13 beyond targeted advertising on Facebook.
 14

15 128. Cambridge Analytica ("CA") was a British political consulting firm that
 16 combined data harvesting and analytics for use in political advertising. The app consisted of a
 17 series of questions that were used to build a psychological profile on users. The app harvested
 18 data not only from the app users' own apps, but also from the users' Facebook friends.
 19

20 129. CA's practices were uncovered in March 2018, when it was revealed that, based
 21 on the 270,000 Facebook users who used a CA app called "This Is Your Digital Life," CA was
 22 able to access the personal data of up to 87 million Facebook users. The vast majority of these
 23 users had not given CA permission to access their data.
 24

25 130. After the scandal broke, Facebook banned the app and claimed that CA had
 26 breached Facebook's terms of service.⁹⁹ However, an investigation revealed that, as early as
 27

28 ⁹⁹ Kurt Wagner, Here's how Facebook allowed Cambridge Analytica to get data for 50
 million users, Vox, Mar. 17, 2018, available at <https://k1.link/2ToOFLZ>.

1 April 2015, Facebook recognized that it was unable to keep track of how many app developers
 2 were using previously downloaded data.¹⁰⁰ And Facebook’s data permissions allowed apps to
 3 access data not only about an app user, but about all of the app user’s friends.

4 131. As early as at least 2010, Facebook allowed third parties to access the data of a
 5 Facebook user’s friends, and this policy formed part of the basis for the FTC’s 2011 complaint.
 6 In 2012, as part of its settlement with Facebook, the FTC ordered that Facebook “shall not
 7 misrepresent in any matter, expressly or by implication, the extent to which [Facebook]
 8 maintains the privacy or security of Covered Information, including . . . [Facebook’s collection,
 9 use, or disclosure of any Covered Information[.]” In 2015, in addition to Facebook’s other
 10 earlier acts of deception, Facebook thereafter represented to users that it was ending the practice
 11 of allowing third parties to access the data of users’ friends. Contrary to Facebook’s
 12 representation, however, and thus in breach of its 2012 settlement with the FTC, most third
 13 parties could continue to access this data until 2016.

14 132. Even after 2016, and until at least 2018, Facebook still allowed some number of
 15 third parties to access the data of users’ friends. The DOJ expressly noted Facebook’s
 16 falsehoods regarding its sharing of the data of its users’ data in the DOJ’s 2019 complaint against
 17 Facebook for Facebook’s breach of its 2012 settlement agreement with the FTC. *See United*
 18 *States, v. Facebook, Inc.*, 1:19-cv-02184 (D.D.C.), Dkt. 1, ¶¶ 5–9. It was only after news of the
 19 Cambridge Analytica scandal broke that Facebook’s continued deception regarding its sharing of
 20 the data of its users’ friends began to come to light. In its 2019 complaint against Facebook, the
 21 DOJ cautioned that “[t]he full scale of unauthorized collection, use, and disclosure of consumer
 22

 25
 26
 27 ¹⁰⁰ Deepa Seetharaman and Kirsten Grind, *Facebook’s Lax Data Policies Led to Cambridge*
 28 *Analytica Crisis*, N.Y. Times, March 20, 2018, available at <https://kl.link/3jt8o86>.

1 information resulting from Facebook's conduct is unknown due, at least in part, to the
 2 company's lack of recordkeeping." *Id.* ¶ 126.

3 133. By this time in 2018, however, Facebook's social media monopoly was fully
 4 entrenched with over 217 million users. That year, Facebook earned over \$55 billion in revenue,
 5 almost completely from targeted advertising made more valuable to Facebook and third parties
 6 due to a lack of meaningful data privacy protections.
 7

8 134. In September of 2019, Facebook said it suspended tens of thousands of apps for
 9 improperly taking users' personal data and other transgressions, "a tacit admission that the scale
 10 of its data privacy issues was far larger than it had previously acknowledged."¹⁰¹ Facebook
 11 eventually disclosed that it had suspended 69,000 apps, and 10,000 of those apps were flagged
 12 for potentially misappropriating personal data from Facebook users.¹⁰² The scale and scope of
 13 Facebook's data privacy issues made clear that its lackluster data privacy protections were a
 14 feature, not a bug, of Facebook's social network.
 15

16 135. On July 24, 2019, the FTC and the Department of Justice announced that
 17 Facebook would pay a \$5 billion penalty, and submit to new restrictions and a modified
 18 corporate structure, to settle charges that the company had "deceiv[ed] users about their ability to
 19 control the privacy of their personal information."¹⁰³
 20

21 136. The largest penalty ever imposed by the FTC before that time was \$275 million.
 22 The FTC explained:
 23

23 ¹⁰¹ Kate Kogner, Gabriel J.X. Dance, and Mike Isaac, *Facebook's Suspension of 'Tens of*
 24 *Thousands' of Apps Reveals Wider Privacy Issues*, N.Y. Times, Sept. 20, 2019, available at
<https://kl.link/31JmImH>.

25 ¹⁰² See Facebook, *An Update on Our App Developer Investigation*, Sept. 20, 2019, available
 26 at <https://kl.link/31FSVeP>.

27 ¹⁰³ Federal Trade Commission, FTC Imposes \$5 Billion Penalty and Sweeping New Privacy
 28 Restrictions on Facebook, available at <https://kl.link/34snVR0>.

1 137. “Facebook monetizes user information through targeted advertising, which
 2 generated most of the company’s \$55.8 billion in revenues in 2018. To encourage users to share
 3 information on its platform, Facebook promises users they can control the privacy of their
 4 information through Facebook’s privacy settings.”¹⁰⁴

5 138. “[But] Facebook repeatedly used deceptive disclosures and settings to undermine
 6 users’ privacy preferences . . . These tactics allowed the company to share users’ personal
 7 information with third-party apps that were downloaded by the user’s Facebook “friends.” . . . In
 8 addition, the FTC alleges that Facebook took inadequate steps to deal with apps that it knew
 9 were violating its platform policies.”¹⁰⁵

10 139. The FTC’s 2019 charges made clear that Facebook had egregiously violated the
 11 FTC’s 2012 order, described above, by repeatedly using deceptive disclosures and settings to
 12 undermine users’ privacy preferences.

13 140. Consumers had relied on Facebook’s 2012 settlement with the FTC in deciding to
 14 continue to give Facebook access to their personal data in exchange for use of Facebook’s
 15 platform. But by the time consumers learned that Facebook had violated that settlement, they
 16 could not reasonably switch to a comparable social media platform. Facebook had already
 17 achieved monopoly power in the Social Network and Social Media Markets, and network
 18 effects, high barriers to entry, and immense switching costs made more likely that Facebook’s
 19 monopoly would be maintained. Although market forces can sometimes reign in companies who
 20 deceive users, the Social Network and Social Media Markets’ unique features made it more
 21 difficult for the market to discipline Facebook for violating its commitments to consumers.
 22
 23
 24
 25
 26

27 ¹⁰⁴ *Id.*

28 ¹⁰⁵ *Id.*

1 141. Notwithstanding widespread outrage after the Cambridge Analytica scandal, the
 2 vast majority of Facebook users have continued to use Facebook and its family of products. A
 3 consumer survey revealed that 58.1% of Facebook users did not change their behavior on
 4 Facebook at all, despite learning of the Cambridge Analytica scandal.¹⁰⁶ Of the 41.9% of
 5 Facebook users that *did* change their behavior, only 9.6% deleted or deactivated their Facebook
 6 accounts:¹⁰⁷

7 142. The reason that the vast majority of Facebook users have continued to use
 8 Facebook and its products despite Facebook's complete and utter disregard for its users' data, as
 9 partially illuminated in the Cambridge Analytica scandal's aftermath, is clear. As Facebook was
 10 keenly aware, a social network really only has value if users' friends use it too. And once a social
 11 network reaches critical mass, it wins in this market characterized by network effects and users
 12 generally no longer have a viable alternative to the social graph, "as there is no reason for users
 13 to start using a social network if there is no one there with whom they can connect."¹⁰⁸ Thus,
 14 notwithstanding widespread outrage after the Cambridge Analytica scandal, few Facebook users
 15 stopped using Facebook, because there was no longer any other viable platform to use.

18 ***Facebook is Attempting to Use (and Has Successfully Used) Anticompetitive
 19 Acquisitions and Threats to Destroy Competition in the Social Network and Social
 20 Media Markets.***

21 143. While Facebook increased its market power through consumer deception about its
 22 data privacy practices, Facebook also sought to protect and expand its monopoly by regularly
 23
 24

25 ¹⁰⁶ Julie Beck, *People Are Changing the Way They Use Social Media*, The Atlantic (June 7,
 26 2018), available at <https://kl.link/33K1aaU> (last accessed Dec. 11, 2020).

27 ¹⁰⁷ *Id.*

28 ¹⁰⁸ House Report, *supra*, at 89.

destroying and acquiring competitive threats, and it used its market power and data advantage to anticompetitively achieve its monopolistic objectives.

144. Since its founding in 2004, Facebook has acquired at least 63 companies,¹⁰⁹ conduct that has only recently been revealed as distinctly anticompetitive in that (as has been revealed in the last two years) Facebook used the data it deceptively obtained from users to identify nascent competitors and then to target them for acquisition or destruction. These anticompetitive acquisitions were enabled by and the result of Facebook's deception.

Facebook's Tracking of Consumers' Personal Data Allowed it to Identify Competitors and then Eliminate Them Through a Strategy of Copy, Acquire, or Kill.

145. Facebook used the data that it obtained from users to track the websites and apps visited by its users—often without full disclosure—in order to identify which upstart competitors were gaining traction so that it could target them for acquisition or destruction. Facebook “led a sustained effort to surveil smaller competitors to benefit Facebook . . . steps taken to abuse data, to harm competitors, and to shield Facebook from competition.”¹¹⁰ In fact, Facebook intentionally developed its ability to surveil users to aid its acquisition strategy, which has continued from the point at which it first emerged as the largest Social Network through today.

146. Historically, Facebook had used internal data and data from Comscore, a data analytics and measurement firm, to track the growth of competitive threats.¹¹¹ But Facebook's efforts were only as good as that underlying data. Accordingly, Facebook determined that by securing more robust data from its users through increased surveillance, Facebook could better remove future competitors from the social media chessboard.

¹⁰⁹ See *id.* at 149.

¹¹⁰ *Id.* at 166.

111 *Id.* at 160–66.

1 147. Accordingly, in April 2012, Facebook’s Director of Growth, Javier Olivan,
 2 emailed Zuckerberg and Chris Cox, Facebook’s Chief Product Officer, about improving
 3 Facebook’s “competitive research.” Olivan indicated that “getting our data in great shape is
 4 going to require effort,” but that Facebook’s building its own system for identifying competitive
 5 threats would “allow us to get 10x better at understanding” competitive threats to Facebook’s
 6 dominance of mobile devices.¹¹² Olivan explained:

7 I keep seeing the same suspects (instagram, pinterest, ...) [sic] both on our
 8 competitive radar / platform strategy as wins . . . I think having the exact data
 9 about their users [sic] engagement, value they derive from [Facebook] . . . would
 10 help us make more bold decisions on whether they are friends or foes. Back to
 11 your thread about “copying” vs. “innovating” we could also use this info to
 12 inspire our next moves.¹¹³

13 148. Zuckerberg responded “Yeah, let’s do it.” Underscoring the importance to
 14 Facebook of utilizing its users’ data to identify competitive threats, Zuckerberg committed to
 15 “find[ing] some time periodically during my weekly reviews to go over this stuff.”¹¹⁴

16 149. In 2013, Facebook acquired Onavo, an Israeli mobile web analytics company that
 17 ran a virtual private network (“VPN”), for \$115 million. Prior to acquiring Onavo, Facebook
 18 had relied on Onavo’s surveillance of Facebook’s competitors for years, such as during the
 19 process of acquiring Instagram, and Facebook ultimately acquired and used Onavo’s assets to
 20 track potential competitors through non-public, internal, real-time data about its users’
 21 engagement, usage, and time spent on other apps.¹¹⁵ Tellingly, at the time it acquired Onavo,
 22 Facebook did *not* intend to place Onavo’s employees in Facebook’s Data Analytics team.

23 ¹¹² *Id.* at 161

24 ¹¹³ *Id.*

25 ¹¹⁴ *Id.*

26 ¹¹⁵ Betsy Morris and Deepa Seetharaman, *The New Copycats: How Facebook Squashes*
 27 *Competition From Startups*, Wall Street Journal, August 9, 2017, available at
<https://kl.link/3e6nMpW>.

1 Instead, in acquiring Onavo, Facebook planned to place Onavo's employees, including its
 2 cofounder, Guy Rosen, under Facebook's Growth team, reporting to Javier Olivan.¹¹⁶

3 150. To obtain extensive information on a user's usage of mobile applications and of
 4 bandwidth, Onavo cloaked its spyware in VPNs, data compression, and even in mobile privacy
 5 apps. Onavo sold the mobile usage data it collected to Facebook, which in turn used the real-
 6 time information it received from Onavo to determine which mobile applications posed a threat
 7 to Facebook's dominance and to the substantial barriers to entry protecting Facebook from new
 8 entrants and competition.

9 151. Facebook used Onavo's data to: (a) identify and target competitors from which
 10 Facebook could demand concessions; (b) identify and target competitors to whom Facebook
 11 would completely deny access to its platform; and (c) identify and target competitors that
 12 Facebook would remove from the competitive landscape entirely through acquisition.

13 152. Facebook immediately began integrating Onavo's applications into both its
 14 business operations and its acquisition strategy. Facebook, for example, began analyzing data
 15 secretly collected from Onavo's Protect software, which was a massive surveillance and data
 16 collection scheme disguised as VPN software. Billed as a way to "keep you and your data safe,"
 17 Onavo Protect in fact monitored all web and mobile application traffic on a user's mobile device.

18 153. When an Onavo Protect user opened a mobile app or website, Onavo software
 19 secretly redirected the traffic to Facebook's servers, where the action was logged in a massive
 20 database. Facebook product teams then analyzed the aggregated Onavo data to determine which
 21 apps and features people were using in real time, how frequently they used the apps, and for how
 22 long. If the data in an app was not encrypted, this information was as specific as (for example)

23
 24
 25
 26
 27
 28 ¹¹⁶ House Report, *supra*, at 161.

1 the number of photos the average user likes or posts in a week in that app. By February 2018,
 2 Onavo apps had been downloaded thirty-three million times across both iOS and Android.

3 154. Facebook has used extensive surveillance of user behavior in order to identify and
 4 target nascent competitive threats. Using the data it obtained from Onavo and other sources,
 5 Facebook then eliminated upstart competitors by demanding concessions in agreements, by
 6 denying access to vital sources of data and information on Facebook's platform, or by
 7 acquisition. The technology Facebook obtained from Onavo and other data brokers allowed
 8 Facebook to protect and further its market dominance. Some of the ways that Facebook exploited
 9 users' data that Facebook obtained from Onavo or other sources to inform Facebook's
 10 anticompetitive "copy, acquire, kill" strategy are detailed below. Notably, however, the extent to
 11 which Facebook used ill-gotten user data to pursue these strategies was not known until the last
 12 two years.
 13

14

***Facebook Threatened Competitors with Discriminatory Practices to Help Drive
 15 its Anticompetitive Acquisition Strategy.***

16 155. In addition to the surveillance Facebook conducted through Onavo, Facebook's
 17 "copy, acquire, kill" strategy was also built on the company's willingness to use deceptively-
 18 obtained user data to target key competitors by discriminatorily denying them access to the
 19 "Facebook Platform." The Facebook Platform allows third parties to develop products that work
 20 in conjunction with Facebook. Zuckerberg has described Facebook Platform's purpose as
 21 "mak[ing] Facebook into something of an operating system so you can run full applications[.]"¹¹⁷
 22

23 156. Over the last decade, Facebook has also used discriminatory access to its social
 24 graph and selective enforcement of its Platform policies to prevent possible competitors from
 25

26 ¹¹⁷ David Kirkpatrick, *Facebook's plan to hook up the world*, CNN Money (May 29, 2007),
 27 available at <https://money.cnn.com/2007/05/24/technology/facebook.fortune/> (last accessed
 December 11, 2020).

1 emerging, continuing to harm consumers at every turn. As Zuckerberg said regarding identified
 2 competitive threats: “I think the right solution here is to just be a lot stricter about enforcing our
 3 policies and identifying companies as competitors.”¹¹⁸

4 157. Facebook did exactly that, using supposed violations of Facebook’s policies as a
 5 pretext to cut off social apps that had become too popular, like Vine, Stackla, Ark, and
 6 MessageMe. Facebook cut off these social apps’ access to Facebook’s social graph because
 7 Facebook was fearful that continued access would allow these apps to launch their own
 8 competing services that would challenge any one of Facebook’s ever-expanding cache of
 9 products.¹¹⁹ As an example, Facebook penalized Ark, a third-party app that Facebook users
 10 could use in conjunction with Facebook, for the manner in which Ark accessed data on
 11 Facebook.¹²⁰ A former Facebook employee explained: “It seemed clear that leadership imposed
 12 [a] more severe punishment against Ark because Mr. Zuckerberg viewed Ark as competitive
 13 with Facebook, as Facebook was exploring an acquisition of Ark at the same time as it was being
 14 investigated for policy violations.”¹²¹

158. By the end of 2011 and the beginning of 2012, Facebook executives debated a
 17 plan to prevent third-party developers from building their own competing social media networks
 18 that might be capable of generating engagement and social media data independent of Facebook
 19 Platform. Social media mobile applications, such as Line, WeChat, and Instagram were creating
 20 their own independent user bases and were becoming emerging competitive threats.

22 159. Facebook’s solution to address these potential competitors was a scheme to
 23 disrupt the growth of these applications by first attracting third-party app developers to build
 24

25 ¹¹⁸ House Report, *supra*, at 167.

26 ¹¹⁹ *Id.* at 166.

27 ¹²⁰ *Id.* at 169.

28 ¹²¹ *Id.*

1 applications for Facebook Platform and then ultimately remove their access to the application
 2 programming interfaces (“APIs”), which removed those developers’ access to the functionality
 3 of Facebook’s social media network as well as information about Facebook users’ friends and
 4 extended network, users’ interactions with each other, and users’ newsfeed posts. This API
 5 access was the central value proposition of Facebook Platform. If developers built apps that
 6 enhanced the value of Facebook’s social network, they would in return receive the benefits of
 7 access to the functionality of Facebook’s social media network, as well as to interconnections
 8 and interactions among Facebook’s users—Facebook’s social graph.
 9

10 160. Facebook’s shut off of API access deprived app developers of access to the APIs
 11 that were most central to their applications, such as Facebook’s “Friends” and “Timeline” APIs,
 12 as well as other vital APIs, including those relating to messaging. Facebook’s identification of
 13 competitive threats and removal of access to these APIs halted the growth of tens of thousands of
 14 third-party applications that relied on these essential APIs and were, in Facebook’s view,
 15 threatening Facebook’s monopoly by eroding the substantial barriers to entry that protected
 16 Facebook’s business. Facebook’s scheme prevented competitive third-party applications from
 17 buying consumer data from Facebook, either through its platform APIs or through its advertising
 18 platform. As a Facebook executive explained in 2012, Facebook would “not allow things which
 19 are at all competitive to ‘buy’ this data from us.”
 20

21 161. In May 2012, Zuckerberg decided to use the threat of shutting off potential
 22 competitors’ access from Facebook Platform to extract social media user data. He instructed
 23 executives to demand “reciprocity” agreements from major competitors that used Facebook’s
 24 platform. Facebook then began to block competitors from using its platform and thereby
 25 obtaining access to Facebook’s data about consumers. Competitors such as Twitter, Instagram,
 26 Pinterest, and Foursquare were required to hand over their most valuable asset—their social
 27

1 media data—to their rival Facebook in order to retain access to Facebook’s APIs and advertising
 2 platform.

3 162. Facebook planned to block competitors from using its platform, thereby
 4 preventing them from eroding the substantial barriers to entry and network effects that protected
 5 Facebook’s market power. For the companies with social media network data that Facebook
 6 needed to further extend its dominance, Facebook would coerce them into agreements to share
 7 their most valuable social data with Facebook. If they refused, Facebook would blacklist them
 8 and take it from them anyway with its own crawling software that would scrape their public-
 9 facing site for information. What began as a negotiation strategy to extract social media data
 10 from rivals became the foundation of Facebook’s Platform strategy. For competitors that posed
 11 enough of a threat to create their own rival network, Facebook required them to hand over the
 12 only leverage they had—the social media data they derived from their users’ engagement.

14 163. Facebook’s willingness to copy and penalize competitors through discriminatory
 15 access to its social graph also made it easier for Facebook to acquire competitors at a reduced
 16 price. For example, during negotiations to acquire Instagram between Zuckerberg and Kevin
 17 Systrom, Instagram’s Chief Executive Officer, Zuckerberg tied Instagram’s response to
 18 Facebook’s advances to Instagram’s continued access to Facebook Platform and Facebook’s
 19 social graph:

21 At some point soon, you’ll need to figure out how you actually want to work with
 22 us. This can be an acquisition, through a close relationship with Open Graph,
 23 through an arms length relationship using our traditional APIs, or perhaps not at
 24 all . . . Of course, at the same time we’re developing our own photos strategy, so
 25 how we engage now will determine how much we’re partners vs. competitors
 26 down the line—and I’d like to make sure we decide that thoughtfully as well.¹²²

27 28 ¹²² *Id.* at 164.

1 164. Similarly, in an earlier conversation between Systrom and Matt Cohler, an
 2 Instagram investor and former senior Facebook adviser, Systrom and Cohler discussed the
 3 possibility that Instagram's response to Facebook's acquisition efforts could affect Instagram's
 4 access to Facebook Platform down the line.”¹²³ In discussing how to engage with Zuckerberg
 5 regarding Facebook's advances, Cohler cautioned: “we need to make it as hard as possible for fb
 6 to mess with our ability to get distribution on the platform[.]”¹²⁴

7 165. In 2015, Facebook cut off all public access to the Friends and News Feed APIs.
 8 Facebook had already extracted valuable social media network data from dozens of competitors
 9 in the run-up to the announcement and ultimate removal of the APIs. This move allowed it to
 10 coerce incipient competitive threats to hand over their social media network data. Facebook
 11 denied API access to thousands of potential competitors, and in the process ensured that its
 12 platform would be the only viable platform upon which a third-party social media application
 13 could be built.

14 166. After the announcement and through the full removal of the APIs in April 2015,
 15 Facebook made a series of agreements that forced certain competitors to hand their data over to
 16 Facebook. For example, Facebook forced certain third-party developers that it identified as
 17 competitive threats with valuable social data to sign Private Extended API agreements—referred
 18 to throughout this Complaint as “Whitelist and Data Sharing Agreements” or simply “the
 19 Agreements”—in order to obtain access to the Friends and/or News Feed APIs. Facebook’s
 20 Whitelist and Data Sharing Agreements included a provision that acknowledged that the APIs
 21 they covered are not available to the general public. An exhibit to each Whitelist and Data
 22

23
 24
 25
 26 ¹²³ Production of Facebook to H. Comm. on the Judiciary (Feb. 13, 2012) at FB-HJC-ACAL-
 27 00101440, available at <https://judiciary.house.gov/uploadedfiles/0010143800101441.pdf>.

28 ¹²⁴ *Id.*

1 Sharing Agreement listed the specific Facebook APIs to which a particular developer was being
 2 granted access. These Agreements were only offered in exchange for massive purchases of
 3 Facebook's social data through mobile advertising and/or through the provision of the
 4 developer's own social data back to Facebook (so-called "reciprocity").

5 167. That year, Facebook provided Whitelist and Data Sharing agreements to the
 6 dating apps Tinder and Hinge. It also secretly signed Whitelist and Data Sharing agreements
 7 with other third-party developers, including Netflix, Nissan, and Lyft. In total, dozens of app
 8 developers entered into such agreements with Facebook.

9 168. Consistent with Facebook's ploy to maintain its monopolistic grip on the Social
 10 Network and Social Media Markets by deceiving consumers about its privacy practices,
 11 Facebook's Simon Cross marketed these changes to its third party access policies as triumphs
 12 that bolstered the security of its users' data. Facebook announced a new slogan, "People First",
 13 because 'if people don't feel comfortable using Facebook and specifically logging in Facebook
 14 and using Facebook in apps, we don't have a platform, we don't have developers.'"¹²⁵ In reality,
 15 however, Facebook described these changes—and its marketing of these changes—as "the
 16 Switcheroo Plan": "Facebook bundled in the decision to cut off third-party access to user data
 17 with other unrelated privacy updates, and explained it all under the new slogan "people first."¹²⁶
 18 "The fact that user data would still be available to some third parties, as long as the companies
 19 gave Facebook enough money and didn't pose a competitive threat, was conveniently elided."¹²⁷

20
 21

28 ¹²⁷ *Id.*

169. Absent these agreements and Facebook's overall scheme to eliminate nascent
1 competitors, other companies could have created their own social media networks. As the
2 amount of user data was generated and monetized on these other networks, the substantial
3 barriers to entry in the Social Media Market would have eroded. But because Facebook could
4 coercively demand all of the social media user data generated on a competing platform, the
5 Whitelist and Data Sharing Agreements ensured that competitive threats could not challenge
6 Facebook's stranglehold over the social media network data, which Facebook obtained by
7 leveraging its social media monopoly.

10 170. In all of its conduct surrounding potential acquisitions, Facebook intentionally
11 surveilled, copied, acquired, and killed competitors with the specific intent, and result, of
12 destroying competition. Facebook acquired and maintained its monopoly due to its predatory
13 and anticompetitive conduct that went on during its string of acquisitions, with a specific intent
14 to monopolize, and with a dangerous probability at the outset and, ultimately, its present day
15 success in obtaining and maintaining its market power.
16

Instagram

18 171. Facebook used the undisclosed surveillance of its users to identify Instagram as a
19 threat and ultimately to acquire the company. Instagram was a photo-sharing mobile application
20 founded by Kevin Systrom, which allowed users to check in, post plans, and share photos. The
21 photo-sharing feature immediately became the app's most popular.

172. Instagram was launched on iOS, Apple's mobile device operating system, in
23
2010. That very day, Instagram became the top free photo-sharing app on Apple's App Store,
24
racking up twenty-five thousand downloads. By the end of the first week, Instagram had been
25
downloaded 100,000 times, and by mid-December 2010, its total downloads had reached one
26
million. The timing of the app was impeccable, as the iPhone 4, with its improved camera, had
27

1 launched just a few months earlier in June 2010. By March 2012, the app's user base had
 2 swelled to 27 million. That April, Instagram was released on Android phones and was
 3 downloaded more than one million times in less than one day. At the time, Instagram was also in
 4 talks to receive another \$500 million funding round.

5 173. Internally, Facebook carefully tracked Instagram's rise, including through
 6 intelligence that it received from surveilling Facebook users' behavior and that it obtained from
 7 Onavo.¹²⁸ Instagram clearly posed a competitive threat to Facebook's dominance, especially due
 8 to its superior photo-sharing feature. Facebook recognized, thanks in part to the commercial
 9 surveillance data it was able to obtain regarding Facebook users, that Instagram could become a
 10 competing social media network that could rival Facebook in the amount of user engagement and
 11 social media data it could produce and monetize.

13 174. Both line employees and high-level executives at Facebook recognized Instagram
 14 as a competitive threat. In an internal Facebook message, one engineer mused that "Instagram is
 15 eating our lunch. We should've owned this space, but we're already losing quite badly."¹²⁹ At
 16 an internal meeting with Facebook employees, Zuckerberg put it bluntly: the "bad news is that
 17 [Instagram is] growing really quickly, they have a lot of momentum, and it's going to be tough to
 18 dislodge them."¹³⁰

20 175. Consistent with its strategy of "copying" would-be competitors, Facebook
 21 initially attempted to create its own product that competed with Instagram. By June 2011,
 22

26 ¹²⁹ House Report, *supra*, at 163.

27 ¹³⁰ *Id.*

1 Facebook had begun developing its own photo-sharing app.¹³¹ One Facebook employee referred
2 to Facebook's anticipated photo-sharing app as "an Instagram clone."¹³² Facebook subsequently
3 released Facebook Camera, a standalone app allowing users to shoot, filter, and share photos
4 from their mobile devices.¹³³

5 176. In addition to “cloning” Instagram, Facebook determined there was another way
6 to hedge its bets, protect its monopoly, and neutralize the competitive threat of Instagram: simply
7 buying Instagram outright. Accordingly, after direct talks with Mark Zuckerberg, Facebook
8 offered to purchase Instagram for \$1 billion in April 2012.
9

10 177. In addition to the \$1 billion price tag, another consideration motivated
11 Instagram's consideration of Facebook's acquisition offer: Facebook's aggressive and
12 anticompetitive threats, which Facebook was safe to make due to its status as a monopolist.

¹³¹ MG Siegler, *Behold: Facebook's Secret Photo Sharing App*, TechCrunch (June 15, 2015), available at https://techcrunch.com/2011/06/15/facebook-photo-sharing-app/?_ga=2.238331010.340941203.1606233329-687565188.1605321310 (last accessed Nov. 25, 2012).

1 178. During negotiations between Facebook and Instagram, Zuckerberg warned Kevin
2 Systrom, Instagram’s Chief Executive Officer, that “[a]t some point soon, you’ll need to figure
3 out how you actually want to work with us. . . . [H]ow we engage now will determine how much
4 we’re partners vs. competitors down the line—and I’d like to make sure we decide that
5 thoughtfully as well.”¹³⁴ In a separate communication with Matt Cohler—an Instagram investor
6 and Facebook’s former Vice President of Product Management—Systrom inquired whether
7 Zuckerberg “will go into destroy mode if I say no” to Facebook’s acquisition offer.¹³⁵ Cohler
8 responded that Zuckerberg would “probably” go into “destroy mode” and “conclude that it’s best
9 to crush Instagram[.]”¹³⁶ Cohler further lamented that “I don’t think we’ll ever escape the wrath
10 of [M]ark” Zuckerberg.¹³⁷

12 179. Clearly crushed into submission and fearful of Facebook’s “wrath,” Instagram
13 acceded to Facebook’s acquisition demand. Facebook consummated the deal immediately prior
14 to its IPO.

Snapchat

17 180. Facebook's acquisition of Instagram allowed Facebook to exclude third-party
18 apps that provided photo and video sharing functionality from Facebook's platform. If an image
19 sharing or video app contained an important feature, Facebook simply cloned it, thus paving the
20 way for excluding a competitive rival from its platform, while simultaneously taking away that

²⁷ ¹³⁷ *Id.* at FB-HJC-ACAL-00101440.

1 rival's share of users. And high-level Facebook executives were acutely aware of this
 2 strategy.¹³⁸

3 181. For example, by 2012, the photo-sharing app Snapchat began had grown in
 4 popularity among consumers. Founded by Evan Spiegel, Snapchat allows users on that platform
 5 to send each other communications—including text, photos, and videos—that appear only for a
 6 fixed period of time and then disappear.¹³⁹ Drawn by Snapchat's privacy appeal, users began to
 7 flock to Snapchat.

8 182. Facing a competitive threat from Snapchat, Facebook engaged in its usual “copy,
 9 acquire, kill” strategy in an attempt to annihilate Snapchat. To formulate that strategy, Facebook
 10 relied on data it obtained from Onavo.¹⁴⁰

12 183. In December 2012, Facebook launched “Poke,” a standalone app designed to
 13 allow users to send photos, videos, or Facebook messages to each other that expire after a few
 14 seconds.¹⁴¹ But to Facebook, the possibility of competing with Snapchat on the merits provided
 15 insufficient guarantee that Facebook’s monopoly position would be secure. So mere days before
 16 Facebook launched Poke, Zuckerberg met with Spiegel, Snapchat’s founder, in Los Angeles.¹⁴²
 17
 18
 19

20 ¹³⁸ Executives such as Zuckerberg, Sherl Sandberg, Facebook’s Chief Operating Officer, and
 21 Sam Lessin, Facebook’s Product Management Director, expressly endorsed “cloning” other
 22 competing platforms’ popular features. *See House Report, supra*, at 163.

23 ¹³⁹ Srinivasan, *supra*, at 53.

24 ¹⁴⁰ Karissa Bell, “*Highly confidential*” documents reveal Facebook used VPN app to track
 25 competitors, Mashable (Dec. 5, 2018), available at: <https://mashable.com/article/facebook-used-onavo-vpn-data-to-watch-snapchat-and-whatsapp/> (last accessed November 25, 2020).

 27 Expiring Text, Photos, And Videos*, TechCrunch (Dec. 21, 2012), available at:
<https://techcrunch.com/2012/12/21/facebook-poke-app/> (last accessed November 25, 2020).

28 ¹⁴² J.J. Colao, *The Inside Story Of Snapchat: The World’s Hottest App Or A \$3 Billion
 29 Disappearing Act?*, Forbes (Jan. 20, 2014), available at <https://www.forbes.com/sites/jjcolao/2014/01/06/the-inside-story-of-snapchat-the-worlds-hottest-app-or-a-3-billion-disappearing-act/>

1 During the meeting, Zuckerberg described Facebook's soon-to-be-released Poke app to Spiegel.
 2 Spiegel has described Zuckerberg's representations during the meeting as follows: "It was
 3 basically like, 'We're going to crush you.'"¹⁴³

4 184. After the meeting and following Facebook's launch of Poke, Facebook made
 5 additional overtures to Snapchat in an attempt to cement its top-of-the-ladder status.¹⁴⁴ Facebook
 6 ultimately offered \$3 billion to acquire Snapchat. Facebook's \$3 billion offer made clear that
 7 Facebook was willing to pay a premium over Snapchat's then-existing market value with the
 8 added value of neutralizing a possible threat to Facebook's market dominance.

9 185. Snapchat rejected Facebook's offer, and Facebook responded by copying *even*
 10 *more* of Snapchat's features that are popular with consumers. For example, Snapchat's "Stories"
 11 feature allows Snapchat users to post a collection of images and video in a rapid string that other
 12 Snapchat users may view for 24 hours. In 2016, Facebook (through Instagram) launched its own
 13 feature—also called "Stories"—which is "nearly identical" to Snapchat's version.¹⁴⁵ By April
 14 2017, Facebook's "Stories" feature on Instagram had become more popular than Snapchat's
 15 version, crippling one of Facebook's largest rivals.¹⁴⁶

1 *WhatsApp*

2 186. Facebook's acquisition of WhatsApp followed a similar pattern. WhatsApp began
 3 as mobile application that displayed user statuses in an address book on a smartphone. However,
 4 WhatsApp exploded in popularity when Apple introduced "push notifications" for the iPhone,
 5 allowing developers to ping app users even when they weren't using the app. This feature
 6 became a form of instant messaging, enabling users to broadcast messages to connections within
 7 a user's social network, which was built from their phone's contact list. Because WhatsApp
 8 used the mobile phone's internet connection rather than text messages, the app allowed users to
 9 avoid text messaging fees entirely. WhatsApp's ability to send messages to any user with a
 10 phone using the internet was its most sought-after feature.

12 187. As WhatsApp's popularity began to rise in the early 2010s, Facebook harvested
 13 user engagement data from Facebook's Onavo spyware in order to carefully track WhatsApp.
 14 The data reported that WhatsApp was rivaling Facebook's own Messenger product, and held
 15 third place in terms of user reach among mobile messenger apps for iPhone in the U.S. as of
 16 April 2013. Facebook used Onavo's data to track messages sent through WhatsApp, which more
 17 than doubled messages on Facebook's own mobile product. This same Onavo data showed
 18 massive engagement among WhatsApp users, placing it in fifth place behind Facebook's own
 19 core product; Facebook's newly acquired Instagram; Twitter; Foursquare; and Snapchat.
 20 WhatsApp, although lacking Facebook's market reach, was drawing from the same pool of
 21 limited attention, and it exposed a major vulnerability in Facebook's business model. WhatsApp
 22 threatened Facebook's business, including the barriers to entry and network effects protecting
 23 Facebook's dominance—and because of Onavo, Facebook knew that WhatsApp was a direct
 24 threat to Facebook's monopoly power.

1 188. Facebook then sought to remove WhatsApp as a competitor in order to ensure that
2 Facebook retained its monopoly power in the Social Network and Social Media Markets.
3 Facebook used the insights it had gained from Onavo's data surveillance technology to purchase
4 WhatsApp in 2014 for close to \$22 billion, well above its initial bid of \$16 billion. The
5 transaction made no economic sense for Facebook, other than foreclosing competition in the
6 Social Media and Social Network Markets and protecting Facebook's monopoly power.
7 WhatsApp's revenues were a meager \$10.2 million in 2013. Its six-month revenue for the first
8 half of 2014 totaled \$15.9 million, and the company had incurred a staggering net loss of \$232
9 million in that same period. Facebook had paid twenty billion dollars—thousands of times
10 WhatsApp's revenues—to acquire a money-losing company that created software functionality
11 Facebook itself already had as part of its own products, and could easily build from scratch for a
12 fraction of the cost of the acquisition.

Other Examples of Facebook's "Copy, Acquire, Kill" Strategy

16 189. In addition to the examples described herein, Facebook has employed its “copy,
17 acquire, kill” strategy against other would-be competitors, and the extent to which it did so based
18 on deceptively-obtained user data was not clear until the last two years. For example, shortly
19 after “Houseparty”—a social network that referred to itself as “the internet’s living room”—
20 turned down an acquisition offer from Facebook, Facebook announced that its Messenger app
21 would become a “virtual living room.” Houseparty’s active user base fell by half between 2017
22 and 2018.

190. As another example, Facebook acquired Giphy for \$400 million in May 2020.
24
25 Although Giphy's primary function is to allow users to share GIFs¹⁴⁷ online and through

²⁷ ¹⁴⁷ A “GIF” is a compilation of still images, akin to a flipbook, played in sequence to create a short animated sequence.
²⁸

messaging apps, the transaction will also give Facebook competitive insights into other messaging apps. One commenter said, “While you may successfully block trackers like the Facebook ad pixel following you around online, or even delete your Facebook account, the majority of us wouldn’t suspect we’re being monitored when we’re sending funny images to friends.”¹⁴⁸

191. In addition, Facebook has sometimes acquired companies without the goal of incorporating them into its own business, but rather, simply to eliminate the competitor, a practice referred to as “catch and kill.” For example, Facebook acquired “tbh”—an anonymous social media app—in October 2017. It then shut the app down less than a year later, having made little effort to maintain the platform.¹⁴⁹

192. Facebook's acquisition conduct is part of an ongoing attempt to entrench its market power in the Social Network and Social Media Markets. Facebook's strategy was made possible due to the social data that Facebook obtained as it acquired its monopoly. And Facebook has used that data in order to copy, acquire, or kill competitors, instead of competing with them by providing enhanced data privacy protections to consumers.

Facebook's Use of Onavo Comes to Light.

193. Ultimately, the world learned the truth about the extent of commercial surveillance that technology like Onavo's made possible for Facebook. In August 2018, Apple removed Onavo from its app store following reporting that Facebook was using the app to track users and other apps. Apple ejected Facebook's Onavo app from its marketplace because it violated Apple's rules prohibiting apps from using data in ways far beyond what is required to

¹⁴⁸ Owen Williams, *How Facebook Could Use Giphy to Collect Your Data*, ONEZERO, May 15, 2020, available at <https://kl.link/34AW951>.

¹⁴⁹ See Kaya Yurieff, *Facebook Shuts the Teen App it Just Bought*, CNN Business, July 3, 2018, available at <https://kl.link/37G6HBH>.

run the app and provide advertising. In other words, because Onavo Protect was leveraging far more data than any VPN could conceivably need, it was clear that the true purpose of the app was to spy on Onavo users, and Apple would not allow it. An Apple spokesperson said the company intended to make “it explicitly clear that apps should not collect information about which other apps are installed on a user’s device for the purposes of analytics or advertising/marketing and must make it clear what user data will be collected and how it will be used.”¹⁵⁰

194. The amount of commercial surveillance that Onavo’s technology enabled was jaw-dropping. Facebook’s Onavo Protect app reported on users’ activities whether their screens were on or off; whether they used WiFi or cellular data; and even when the VPN was turned off. There was simply no rational relationship between the data collected and the purported purpose of the application. Put simply, a VPN that collected data even when the VPN was off was an obvious subterfuge for spying on user behavior.

195. Facebook tried to circumvent Apple’s ban by repackaging its Onavo spyware as a Facebook Research VPN app. Facebook sidestepped the App Store by rewarding teenagers and adults when they downloaded the Research app and gave it root—superuser—access to network traffic on their mobile devices. Facebook has been leveraging its Onavo code in similar ways since at least 2016, administering the program under the codename “Project Atlas”—a name suited to its goal of surveilling app usage on mobile devices in real time.

196. When the news broke in January 2019 that Facebook’s Research apps were repackaged Onavo apps designed to spy on users, Facebook immediately withdrew the programs from the Apple App store. Apple again concluded that Facebook had tried to violate its policies by obtaining a level of administrative privileges on an iPhone or iPad that would have been

¹⁵⁰ House Report, *supra*, at 161.

1 designed for a company's internal IT department. In addition to Onavo's Protect app, Facebook
 2 has attempted to deploy its surveillance software as other forms of utility applications that
 3 require extensive or privileged access to mobile devices. For example, Facebook released the
 4 Onavo Bolt app, which locked apps behind a passcode or fingerprint while it covertly surveilled
 5 users—and sent Facebook the results. Facebook also shut that app down the very day that its
 6 surveillance functionality was discovered. The Onavo Bolt app had been installed approximately
 7 10 million times.

9 ***Facebook's Anticompetitive Practices Have Harmed and Continue to Harm
 10 Competition in the Social Network and Social Media Markets.***

11 197. Facebook's anticompetitive practices described above have harmed and continue
 12 to harm competition the Social Network and Social Media Markets in the United States.

13 198. Facebook is dangerously close to obtaining, or has obtained, monopoly power in
 14 the Social Network and Social Media Markets in the United States, and it has wielded that power
 15 to anticompetitively foreclose competition.

16 199. Facebook's deception of consumers has harmed, and continues to harm,
 17 competition. In many markets, the advantage of consumer deception quickly dissolves once the
 18 deception is uncovered. But the direct and indirect network effects inherent in the Social
 19 Network and Social Media Markets create markets with strong network effects and high barriers
 20 to entry. Because of unduly high switching costs, users cannot simply switch to a competitor
 21 once the dominant player's deception is exposed, even though they wanted to do so, as
 22 evidenced by the "#DeleteFacebook" movement after the revelations regarding Cambridge
 23 Analytica in 2018.

24 200. Facebook's deception about its lack of privacy protections acted as a welcome
 25 sign, inducing a ground swell of users to join Facebook because of Facebook's avowed privacy
 26 appeal. But once a critical mass of users, continually expanding due to strong network effects

1 obtained through its deception, joined Facebook at the expense of its competitors, Facebook
 2 slammed the door shut. Because of high switching costs—including the possibility of losing
 3 contact with friends, family and acquaintances, an inability to access data that Facebook users
 4 have spent years or more inputting into Facebook, and the time and opportunity cost of starting
 5 over with a competitor—and the lack of viable alternatives as a result of Facebook’s deception,
 6 consumers are now trapped. As a result, Facebook has cheated its way to the finish line in the
 7 race for dominance without being the best competitor. Instead of providing consumers a way out,
 8 such as alternatives to Facebook, the Social Network and Social Media Markets help to lock in
 9 Facebook’s unfair advantage.
 10

11 201. Facebook’s acquisition conduct also has harmed, and continues to harm,
 12 competition. Facebook built and maintained its monopoly over the Social Network and Social
 13 Media Markets by exploiting deceptively obtained user data to target competitive threats, which
 14 Facebook then proceeded to acquire, copy, or kill. Facebook tracked its users across the internet,
 15 often without permission, to identify companies that might threaten its monopoly. Facebook
 16 then used a pattern of discriminatory data access to destroy potential competitors or force them
 17 to sell at a discount. Facebook used its data advantage not to run faster, but to kneecap the
 18 competition. That approach is not surprising given the win-at-all-costs culture at Facebook.
 19

20 202. Facebook’s two-pronged anticompetitive strategy harmed competition in the
 21 Social Network and Social Media Markets. As detailed herein, Facebook’s strategies made it
 22 nearly impossible for competitors—both nascent and established—to challenge Facebook’s
 23 monopoly by competing with Facebook on data privacy protections or by building a higher
 24 quality social network.
 25

26 203. But for Facebook’s anticompetitive practices, consumers would have had more
 27 options in the Social Network and Social Media Markets for connecting with other users. Those
 28

1 companies would have created social networks and social media platforms that competed with
2 Facebook on the merits of data privacy protections and social network and platform quality,
3 without being dependent on Facebook for comprehensive social media network data. Because
4 Facebook anticompetitively restrained competition in its efforts to acquire and obtain social
5 media and social network monopolies, competition along the dimensions of user privacy and
6 product quality was foreclosed. Ultimately, consumers suffered, and continue to suffer, as a
7 result of Facebook's wantonly anticompetitive conduct.

Facebook’s Anticompetitive Conduct Has Damaged Consumers in Direct and Quantifiable Ways.

13 205. Facebook’s anticompetitive foreclosure of competition has harmed consumers in
14 many ways. When agreeing to Facebook’s Terms of Service, consumers agree to give up things
15 of material value: personal information and attention. Facebook then sells for money,
16 measurable in quantifiable units, its users’ information and attention to third parties, including
17 advertisers. But for Facebook’s anticompetitive conduct, which has substantially reduced, if not
18 eliminated competition, consumers would have had more choices in the Social Network and
19 Social Media Markets, instead of the few, if any, they have today. Absent Facebook’s
20 anticompetitive conduct, Facebook would have had to provide consumers increased incremental
21 value, that is quantifiable in measurable units, in return for consumers’ data. Otherwise,
22 consumers would have given their data and attention to other platforms, which would have
23 provided consumers increased incremental value. Consumers would have received the fair
24 market value for their data and attention. That value was artificially decreased by Facebook’s
25 anticompetitive conduct.
26
27

1 206. Absent Facebook's anticompetitive conduct, which has substantially reduced, if
 2 not eliminated, competition, consumers would have benefitted from more robust competition in
 3 terms of non-price attributes such as data privacy practices and social media platform quality.
 4 Users could have benefitted from Facebook's social media network without having to surrender
 5 as much personal data to Facebook and other third parties that use Facebook for app
 6 development or targeted advertising. Similarly, users could have benefitted from competition
 7 that would have resulted in Facebook or its alternatives offering higher-quality services, such as
 8 interoperability between platforms and portability of users' data.
 9

10 207. If Facebook had disclosed the scope of the data it collected and the level of fine-
 11 grained targeted marketing that it enabled, consumers would have benefitted from competition in
 12 the Social Network and Social Media Markets, resulting in a better Facebook or better
 13 alternatives and lower consumer costs in the form of information and attention. Instead,
 14 Facebook has artificially stifled innovation, thrusting on consumers a product of reduced-quality
 15 and leaving consumers with no meaningful alternative.
 16

17 208. If Facebook had not used its social media monopoly to target its competition for
 18 destruction, consumers would have benefitted from more competition, and hence more options
 19 and lower costs, in the Social Network and Social Media Markets. Even elected officials have
 20 recognized that absent Facebook's anticompetitive acquisition strategy, Facebook would have
 21 had to compete on privacy issues, benefiting consumers:¹⁵¹
 22
 23
 24
 25
 26

27 28 ¹⁵¹ United States Representative Ro Khanna, Twitter (Jan. 25, 2019), available at
<https://twitter.com/RepRoKhanna/status/1088850988218413058>.

Rep. Ro Khanna

@RepRoKhanna

...

1 2 Replying to @RepRoKhanna
2
3 4 2/2 -- Imagine how different the world would be if
4 5 Facebook had to compete with Instagram and
5 6 WhatsApp. That would have encouraged real
6 7 competition that would have promoted privacy and
7 8 benefited consumers.

12

13 14 209. Because Facebook engaged in the anticompetitive practices described above,
14 15 consumers suffered substantial, cognizable, and quantifiable economic harm. Unless these acts
15 16 are enjoined, consumers will continue to suffer harm caused by Facebook's anticompetitive
16 17 practices.

18 19 **ACCRUAL OF CLAIM, EQUITABLE TOLLING, FRAUDULENT CONCEALMENT,**
19 20 **CONTINUING VIOLATION, AND ASCERTAINMENT OF DAMAGES**

21 22 210. Plaintiff did not discover the existence of the anticompetitive acts alleged herein
22 23 until, at the earliest, March 17, 2018. As the House Antitrust Subcommittee recently explained,
23 24 “[t]o the extent that consumers are aware of data collection practices, it is often in the wake of
24 25 scandals involving large-scale data breaches or privacy incidents such as Cambridge
25 26 Analytica.”¹⁵² It was not until the media uncovered the details of the Cambridge Analytica
26 27 scandal on March 17, 2018, that consumers began to discover Facebook's anticompetitive
27 28 practices that harmed consumers and that would have enabled consumers to raise the claims
28 29 presented in this action. Similarly, it was not until the media revealed the details of Apple's ban
29 30 of Onavo on August 22, 2018, that consumers learned of the additional facts regarding

28 29 30 ¹⁵² House Report, *supra*, at 54.

1 Facebook's anticompetitive practices necessary for consumers to raise the claims presented in
 2 the action.

3 211. Nor could Plaintiff or any class member have discovered, through the exercise of
 4 reasonable diligence, the existence of the anticompetitive acts alleged herein until, at the earliest,
 5 March 2018. That is because, as the House Antitrust Subcommittee has recognized, "nuances in
 6 privacy terms are relegated to investigative journalists to discover and explain."¹⁵³ The
 7 subsequent investigative reporting that brought to light Facebook's systematic deception and
 8 commercial surveillance was not made public until, at the earliest, March 17, 2018, following the
 9 Cambridge Analytica scandal. Accordingly, the statute of limitations should be equitably tolled
 10 to March 2018. As such, all of the anticompetitive conduct described in this complaint presents
 11 timely claims, including Facebook's deception and acquisition conduct going back to before it
 12 achieved its social media monopoly.

14 212. Facebook fraudulently concealed its deceptive practices and commercial
 15 surveillance efforts, including the extent of its data privacy practices and anticompetitive
 16 acquisition strategy. As a result, Plaintiff and Class members were unaware of Facebook's
 17 unlawful conduct alleged herein. Facebook affirmatively and fraudulently concealed its
 18 unlawful conduct by, *inter alia*:

20 a) Agreeing to a settlement with the FTC in 2011 which "barred [Facebook]
 21 from making misrepresentations about the privacy or security of consumers' personal
 22 information[.]"

23 b) Publicly misrepresenting, before and after its 2011 settlement with the FTC,
 24 that it was protecting users' privacy. Examples of such public statements include:

28 ¹⁵³ *Id.*

1 c) Mark Zuckerberg's May 2010 statement on NPR that "There's this false
2 rumor that's been going around which says that we're sharing private information with
3 applications and it's just not true."

4 d) Mark Zuckerberg's November 2011 statement on his own Facebook page
5 that "everyone needs complete control over who they share with at all times."

0 e) Mark Zuckerberg's November 2011 statement on his own Facebook page
1
2 regarding the 2011 FTC Settlement that the settlement "means we're making a clear and formal
3 long-term commitment to do the things we've always tried to do and planned to keep doing –
4 giving you tools to control who can see your information and then making sure only those people
5 you intend can see it."

12 f) Facebook's statement to shareholders in its IPO filing with the Securities
13 and Exchange Commission, indicating that “[w]e also believe that giving people control over what
14 they share is a fundamental principle[.]”

16 g) Mark Zuckerberg's June 8, 2013 statement, posted on Facebook's
17 Newsroom, regarding Edward Snowden's allegations of government surveillance: "We will
18 continue fighting aggressively to keep your information safe and secure."

19 h) Mark Zuckerberg's March 2014 statement on his own Facebook page
20 responding to allegations that the National Security Agency posed as Facebook during a
21 controversial surveillance program: "To keep the internet strong, we need to keep it secure. That's
22 why at Facebook we spend a lot of our energy making our services and the whole internet safer
23 and more secure. . . . Together, we can build a space that is greater and a more important part of
24 the world than anything we have today, but is also safe and secure. I'm committed to seeing this
25 happen, and you can count on Facebook to do our part."

26

1 i) Facebook's statement in its 2016 10-K filing that while "some of our
2 developers or other partners, such as those that help us measure the effectiveness of ads, may
3 receive or store information provided by us or by our users through mobile or web applications
4 integrated with Facebook[.]" Facebook only "provide[s] *limited information* to such third parties
5 *based on the scope of services* provided to us."

j) Mark Zuckerberg's March 2016 public statement in response to a statement issued by its subsidiary, *WhatsApp*, assuring that "Facebook stands with many technology companies to protect you and your information."

10 k) Mark Zuckerberg's March 2018 statement following news outlets'
11 reporting on the Cambridge Analytica scandal that “[w]e have a responsibility to protect your data,
12 and if we can't then we don't deserve to serve you.”

13 213. Plaintiff and the class members did not discover, nor could they have discovered
14 through reasonable diligence, that Facebook was violating the antitrust and other laws until less
15 than four years before this litigation was initially commenced. Facebook did not tell Plaintiff or
16 other Class members that it was violating its 2011 Settlement with the FTC, deceiving
17 consumers and selling their data to extract revenue from third parties, or exploiting consumers'
18 trust by surveilling them and using their data to identify competitors to "acquire, copy, or kill."
19 To the contrary, Mark Zuckerberg—Facebook's founder, Chief Executive Officer, and public
20 face—repeatedly represented otherwise. Indeed, in announcing its largest-ever \$5 billion fine
21 against Facebook following the Cambridge Analytica scandal, the FTC explained that while
22 Facebook "encourages users to share information on its platform" by "promis[ing] users they can
23 control the privacy of their information," Facebook "repeatedly used deceptive disclosures and
24 settings to undermine users' privacy preferences[.]"

1 214. In addition, Facebook's anticompetitive conduct was, by its very nature,
 2 inherently self-concealing because it was performed outside the sight and knowledge of
 3 consumers. As a result, Plaintiff and Class members did not discover Facebook's scheme, even
 4 with the exercise of reasonable diligence.

5 215. Since the start of the class periods, Facebook has committed continuing violations
 6 of the antitrust laws, resulting in monetary injury to Plaintiff and Class members. As described
 7 herein, Facebook has engaged in a pattern of independent misrepresentations to users, designed
 8 to acquire, maintain, and prolong Facebook's monopoly position. Similarly, Facebook has
 9 weaponized its users' data as a part of its serial acquisition strategy to "acquire, copy, or kill" its
 10 competitors. Each of these injurious acts were separate and independent overt acts during the
 11 limitations period that were new and independent acts that inflicted new and accumulating
 12 injuries on consumers. Each of Facebook's instances of deception as to its data privacy practices
 13 and commercial surveillance over time were acts new and independent from its past issues with
 14 data privacy and commercial surveillance. Facebook's continued exposure of private
 15 information to app developers, advertisers, and other third parties leading up to 2018 and its
 16 anticompetitive acquisition practices were additional, independent, and overt acts that harmed
 17 competition and inflicted new and accumulating economic injuries on consumers.

20 216. Moreover, Plaintiff's and Class members' harms were not ascertainable—
 21 sufficient to give rise to the claims presented herein—more than four years prior to the date that
 22 this action was first commenced. Since the harm that Plaintiff and Class members allege had not
 23 crystallized more than four years prior to the date that this action was initiated, the antitrust
 24 claims presented herein are timely.
 25
 26
 27
 28

1 **CLASS ACTION ALLEGATIONS**

2 217. Plaintiff re-alleges and incorporates by reference herein all the allegations
 3 contained above.

4 218. Pursuant to Federal Rule of Civil Procedure 23(b)(3), Plaintiff asserts claims on
 5 behalf of the following Classes:

6 a) **The Antitrust Consumer Class:** All persons or entities in the United States
 7 who maintained a Facebook profile at any point from 2007 up to the date of the filing of this action.
 8 Excluded from the Class are Facebook, any entity in which Facebook has an interest, and any of
 9 Facebook's corporate parents, affiliates, subsidiaries, officers, directors, legal representatives,
 10 successors, and assigns. Also excluded from the Class is any judge, justice, or judicial officer
 11 presiding over this matter and the members of their immediate families and judicial staff.

12 b) **The Unjust Enrichment Consumer Class:** All persons or entities in the
 13 United States who maintained a Facebook profile at any point from 2007 up to the date of the filing
 14 of this action. Excluded from the Class are Facebook, any entity in which Facebook has an interest,
 15 and any of Facebook's corporate parents, affiliates, subsidiaries, officers, directors, legal
 16 representatives, successors, and assigns. Also excluded from the Class is any judge, justice, or
 17 judicial officer presiding over this matter and the members of their immediate families and judicial
 18 staff.

19 219. Plaintiff reserves the right to amend the Class definitions if discovery and further
 20 investigation reveal that the Classes should be expanded, divided into subclasses, or modified in
 21 any other way.

22 220. This action has been brought and may properly be maintained as a class action as
 23 it satisfies the numerosity, commonality, typicality, adequacy, predominance, and superiority

1 requirements of Rule 23(b)(3). Plaintiff seeks to represent ascertainable Classes, as determining
 2 inclusion in the classes can be done through Facebook's own records.

3 221. Although the precise number of Class members is unknown and can only be
 4 determined through appropriate discovery, the proposed Classes number at least in the tens of
 5 millions and is therefore so numerous that joinder of all members would be impracticable.

6 222. Questions of law and fact common to the putative Classes exist that predominate
 7 over questions affecting only individual members, including:

8 a) Whether Facebook's deception of consumers about its data privacy
 9 practices was anticompetitive;

10 b) Whether Facebook's acquisition conduct was anticompetitive;

11 c) Whether Facebook intentionally engaged in anticompetitive acts in order to
 12 obtain or maintain monopoly power;

13 d) Whether Facebook is a monopolist in the Social Network Market;

14 e) Whether Facebook is a monopolist in the Social Media Market;

15 f) Whether Facebook intentionally made material misrepresentations about its
 16 data privacy practices and the extent of its commercial surveillance;

17 g) Whether Facebook's foreclosure of competition in the Social Network
 18 Market caused by its anticompetitive conduct led to cognizable and quantifiable economic harms
 19 to consumers;

20 h) Whether Facebook's foreclosure of competition in the Social Media Market
 21 caused by its anticompetitive conduct led to cognizable and quantifiable economic harms to
 22 consumers;

i) Whether consumers would have had more options and competition amongst social media companies if Facebook would have revealed the full extent of its data privacy practices and commercial surveillance long ago;

j) Whether Facebook's anticompetitive conduct substantially harmed competition in the Social Network Market in the United States;

k) Whether Facebook's anticompetitive conduct substantially harmed competition in the Social Media Market in the United States;

l) Whether Facebook's anticompetitive conduct should be enjoined or whether other appropriate equitable relief, including ordering Facebook to divest assets or submit to more invasive third-party audits of its privacy practices and commercial surveillance.

223. Plaintiff is a member of the putative Classes. The claims asserted by Plaintiff in this action are typical of the claims of the members of the putative Classes, as the claims arise from the same course of conduct by the Defendant and the relief sought is common.

224. Plaintiff will fairly and adequately represent and protect the interests of the members of the putative Classes, as her interests are coincident with, not antagonistic to, the other members of the Classes.

225. Plaintiff has retained counsel competent and experienced in both antitrust and class action litigation.

226. Certification of the Classes is appropriate pursuant to Fed. R. C. P. 23(b)(3) because questions of law or fact common to the respective members of the Class predominate over questions of law or fact affecting only individual members. This predominance makes class litigation superior to any other method available for the fair and efficient adjudication of these claims including consistency of adjudications. Absent a class action it would be unlikely that

1 many members of the Classes would be able to protect their own interests because the cost of
2 litigation through individual lawsuits might exceed the expected recovery.

3 227. A class action is a superior method for the adjudication of the controversy in that
4 it will permit a large number of claims to be resolved in a single forum simultaneously,
5 efficiently, and without the unnecessary hardship that would result from the prosecution of
6 numerous individual actions and the duplication of discovery, effort, expense, and the burden of
7 the courts that individual actions would create.

8 228. In the alternative, the Classes should be certified because:

9 10 a) The prosecution of separate actions by the individual members of the
11 proposed class would create a risk of inconsistent adjudications, which could establish
12 incompatible standards of conduct for Facebook;

13 b) The prosecution of individual actions could result in adjudications, which
14 as a practical matter, would be dispositive of the interests of non-party class members or which
15 would substantially impair their ability to protect their interests; and

16 c) Facebook has acted or refused to act on grounds generally applicable to the
17 proposed Classes, thereby making appropriate final and injunctive relief with respect to the
18 members of the proposed Classes as a whole.

20 **INTERSTATE TRADE AND COMMERCE**

21 229. Plaintiff re-alleges and incorporates by reference herein all the allegations
22 contained above.

23 240. Facebook's anticompetitive conduct has taken place in, and negatively affected
25 the continuous flow of interstate trade and commerce in the United States in that, *inter alia*:

- 1 a) Facebook has provided a social media network and platform and has
2 exchanged consumer information and attention with advertisers and consumers throughout the
3 United States;
- 4 b) Facebook has used instrumentalities of interstate commerce to provide
5 social media services to consumers and advertisers throughout the United States;
- 6 c) In furtherance of the anticompetitive scheme alleged herein, Facebook has
7 traveled between states and exchanged communications through interstate wire communications
8 and via the United States mail; and
- 9 d) The anticompetitive scheme alleged herein has affected billions of dollars
10 of commerce. Facebook has inflicted antitrust injury by artificially raising the cost to consumers
11 of using its platform, in terms of personal information and attention, by providing reduced user
12 privacy protections to consumers in exchange for their personal data, and by artificially reducing
13 consumer choice and competition in the Social Media Market in the United States.

16 **CLAIMS FOR RELIEF**

17 **FIRST CLAIM FOR RELIEF:**

18 **MONOPOLIZATION OF SOCIAL NETWORK MARKET**

19 **Sherman Antitrust Act, § 2**
20 **(On behalf of the Class)**

21 231. Plaintiff re-alleges and incorporates by reference herein all the allegations
22 contained above.

23 232. Facebook has willfully acquired and maintained monopoly power in the relevant
24 Social Network Market. There are no reasonably interchangeable products that would
25 effectively constrain, or have effectively constrained, Facebook from imposing and profitably
26 sustaining during the relevant period a significant artificial decrease in compensation to
27 consumers for their user information and attention paid to advertisements. Facebook also has the
28 power to impose and profitably sustain lower levels of data privacy protections and social media

1 network quality than would occur in a world where Facebook had not illegally monopolized the
 2 Social Network Market. Facebook has the power to control prices and exclude competition in
 3 the Social Network Market.

4 233. By multiple measures, Facebook has dominant market share in the Social
 5 Network Market. As discussed more fully below, Facebook's market share in the Social
 6 Network Market is higher than its share in the Social Media Market. And more than 80% of the
 7 time that consumers in the United States spend using social media is spent on Facebook and
 8 Instagram.
 9

10 234. High barriers to entry, high switching costs, and strong direct and indirect
 11 network effects make it unlikely, at any time in the foreseeable future, for a competitor to enter
 12 or take away substantial market share from Facebook in the Social Network Market in the United
 13 States to compete effectively with Facebook.

14 235. Facebook has willfully acquired and maintained monopoly power in the Social
 15 Network Market by means of predatory, exclusionary, and anticompetitive conduct. Such
 16 conduct includes, but is not limited to: (a) engaging in a scheme to gain market share at the
 17 expense of its rivals by inducing consumers to join Facebook through a pattern of deception
 18 regarding Facebook's data privacy protections and its commercial surveillance; and (b)
 19 weaponizing the data it obtained from consumers by means of deception to destroy competition
 20 through its strategy to "acquire, copy, or kill" any and all of its competitors.
 21

22 236. By eliminating competition and obtaining and maintaining monopoly power over
 23 the Social Network Markets as described above, Facebook was able to, and did, artificially
 24 decrease compensation to consumers for their information and attention and provide lower value
 25 to consumers than it would have provided in a competitive market.
 26

1 237. Facebook's destruction of competition caused antitrust injury to Plaintiff and
 2 Class members by decreasing compensation and lowering value for consumers, who received
 3 lower compensation and lower value from Facebook than those consumers would have received
 4 in the but-for world where Facebook competed on the merits. Plaintiff and the Class were injured
 5 and received substantially less compensation and lower value than they would have absent
 6 Facebook's unlawful and anticompetitive conduct.

7 238. During the relevant period, Plaintiff and the Class members gave Facebook their
 8 personal data and attention in exchange for the use of its social media network. As a result of
 9 Facebook's illegal conduct, Plaintiff and other Class members received lower compensation and
 10 value than they would have absent Facebook's illegal conduct.

12 239. There are no legitimate pro-competitive or business justifications for the conduct
 13 alleged herein, and even if there were, the anticompetitive effects would far outweigh any
 14 possible pro-competitive effects.

15 240. Facebook's acts and practices have continued to be anticompetitive in nature and
 16 tendency and constitute an unfair method of competition, in violation of Section 2 of the
 17 Sherman Act, 15 U.S.C. § 2.

19 241. Facebook's conduct has had a substantial effect on interstate commerce.

20 242. Plaintiff and Class members have been, and will continue to be, injured in their
 21 property as a result of Facebook's conduct.

22 243. Plaintiff and Class members have suffered, and will continue to suffer, injury of
 23 the type that the antitrust laws were intended to prevent, including but not limited to: (a) higher
 24 costs in terms of time and attention; (b) a reduction in consumer choice; and (c) being forced to
 25 accept a service of lesser quality because of reduced competition.

1 244. Plaintiff and Class members seek an award of treble damages or, in the
2 alternative, disgorgement of Facebook's ill-gotten gains. Plaintiff also seeks appropriate
3 equitable relief to enjoin Facebook from continuing to engage in anticompetitive behavior to the
4 detriment of consumers and to remedy the harms that Facebook's monopolization of the Social
5 Network Market has caused, including: (a) divestment of assets that would continue to entrench
6 its monopoly power; and (b) requiring Facebook to submit to independent monitoring of its user
7 privacy practices, data surveillance, and acquisition conduct.

SECOND CLAIM FOR RELIEF:

ATTEMPTED MONOPOLIZATION OF SOCIAL NETWORK MARKET

Sherman Antitrust Act, § 2 (On behalf of the Class)

12 245. Plaintiff re-alleges and incorporates by reference herein all the allegations
13 contained above.

14 246. With respect to the Social Network Market, Facebook has engaged in predatory,
15 exclusionary, and anticompetitive conduct, including but not limited to; (a) obtaining market
16 share through a pattern of deceiving consumers; and (b) exploiting the data it obtained from
17 consumers through deception to systematically destroy competition through its strategy to “copy,
18 kill, or acquire” any and all of its competitors.
19

247. Facebook's conduct has had an anticompetitive effect in the Social Network
Market.

22 248. Facebook's conduct has no legitimate business purpose or procompetitive effect,
23 and even if there were, the anticompetitive effects would far outweigh any possible pro-
24 competitive effects.
25

26 249. Facebook has engaged in the anticompetitive conduct described herein with the
27 specific intent of monopolizing the Social Network Market.

250. Facebook has engaged in the anticompetitive conduct described herein with a dangerous probability of monopolizing the Social Network Market.

251. Facebook's conduct has had a substantial effect on interstate commerce.

252. Plaintiff and Class members have been, and will continue to be, injured in their property as a result of Facebook's conduct.

253. Plaintiff and Class members have suffered, and will continue to suffer, injury of the type that the antitrust laws were intended to prevent, including but not limited to: (a) lower compensation for their time and attention; (b) a reduction in consumer choice; and (c) being forced to accept a service of lesser quality because of reduced competition.

254. Plaintiff and Class members seek an award of treble damages or, in the alternative, disgorgement of Facebook’s ill-gotten gains. Plaintiff also seek appropriate equitable relief to enjoin Facebook from continuing to engage in anticompetitive behavior to the detriment of consumers and to remedy the harms that Facebook’s attempted monopolization of the Social Network Market has caused, including: (a) divestment of assets that would continue to entrench its monopoly power; and (b) requiring Facebook to submit to independent monitoring of its user privacy practices, data surveillance, and acquisition conduct.

**THIRD CLAIM FOR RELIEF:
MONOPOLIZATION OF SOCIAL MEDIA MARKET
Sherman Antitrust Act, § 2
(On behalf of the Class)**

255. Plaintiff re-alleges and incorporates by reference herein all the allegations contained above.

256. Facebook has willfully acquired and maintained monopoly power in the relevant Social Media Market. There are no reasonably interchangeable products that would effectively constrain, or have effectively constrained, Facebook from imposing and profitably sustaining during the relevant period a significant artificial decrease in compensation to consumers for their

1 user information and attention paid to advertisements. Facebook also has the power to impose
 2 and profitably sustain lower levels of data privacy protections and social media quality than
 3 would occur in a world where Facebook had not illegally monopolized the Social Media Market.
 4 Facebook has the power to control prices and exclude competition in the Social Media Market.

5 257. By multiple measures, Facebook has dominant market share in the Social Media
 6 Market. As measured by advertising revenue that is generated by social media platforms in the
 7 Social Media Market, Facebook (including Instagram) has market share of at least 85% of the
 8 Social Media Market. By its own measure, and as reflected in Facebook's internal documents,
 9 Facebook has estimated that it is "95% of all social media in the US[.]". And more than 80% of
 10 the time that consumers in the United States spend using social media is spent on Facebook and
 11 Instagram.

13 258. High barriers to entry, high switching costs, and strong direct and indirect
 14 network effects make it unlikely, at any time in the foreseeable future, for a competitor to enter
 15 or take away substantial market share from Facebook in the Social Media Market in the United
 16 States to compete effectively with Facebook.

18 259. Facebook has willfully acquired and maintained monopoly power in the Social
 19 Media Market by means of predatory, exclusionary, and anticompetitive conduct. Such conduct
 20 includes, but is not limited to: (a) engaging in a scheme to gain market share at the expense of its
 21 rivals by inducing consumers to join Facebook through a pattern of deception regarding
 22 Facebook's data privacy protections and its commercial surveillance; and (b) weaponizing the
 23 data it obtained from consumers by means of deception to destroy competition through its
 24 strategy to "acquire, copy, or kill" any and all of its competitors.

26 260. By eliminating competition and obtaining and maintaining monopoly power over
 27 the Social Media Market as described above, Facebook was able to, and did, artificially decrease
 28

1 compensation to consumers for their information and attention and provide lower value to
 2 consumers than it would have provided in a competitive market.

3 261. Facebook's destruction of competition caused antitrust injury to Plaintiff and
 4 Class members by decreasing compensation and lowering value for consumers, who received
 5 lower compensation and lower value from Facebook than those consumers would have received
 6 in the but-for world where Facebook competed on the merits. Plaintiff and the Class were injured
 7 and received substantially less compensation and lower value than they would have absent
 8 Facebook's unlawful and anticompetitive conduct.

9 262. During the relevant period, Plaintiff and the Class members gave Facebook their
 10 personal data and attention in exchange for the use of its social media network. As a result of
 11 Facebook's illegal conduct, Plaintiff and other Class members received lower compensation and
 12 value than they would have absent Facebook's illegal conduct.

13 263. There are no legitimate pro-competitive or business justifications for the conduct
 14 alleged herein, and even if there were, the anticompetitive effects would far outweigh any
 15 possible pro-competitive effects.

16 264. Facebook's acts and practices have continued to be anticompetitive in nature and
 17 tendency and constitute an unfair method of competition, in violation of Section 2 of the
 18 Sherman Act, 15 U.S.C. § 2.

19 265. Facebook's conduct has had a substantial effect on interstate commerce.

20 266. Plaintiff and Class members have been, and will continue to be, injured in their
 21 property as a result of Facebook's conduct.

22 267. Plaintiff and Class members have suffered, and will continue to suffer, injury of
 23 the type that the antitrust laws were intended to prevent, including but not limited to: (a) higher
 24

1 costs in terms of time and attention; (b) a reduction in consumer choice; and (c) being forced to
2 accept a service of lesser quality because of reduced competition.

3 268. Plaintiff and Class members seek an award of treble damages or, in the
4 alternative, disgorgement of Facebook's ill-gotten gains. Plaintiff also seeks appropriate
5 equitable relief to enjoin Facebook from continuing to engage in anticompetitive behavior to the
6 detriment of consumers and to remedy the harms that Facebook's monopolization of the Social
7 Media Market has caused, including: (a) divestment of assets that would continue to entrench its
8 monopoly power; and (b) requiring Facebook to submit to independent monitoring of its user
9 privacy practices, data surveillance, and acquisition conduct.
10

FOURTH CLAIM FOR RELIEF:

ATTEMPTED MONOPOLIZATION OF SOCIAL MEDIA MARKET
Sherman Antitrust Act, § 2
(On behalf of the Class)

14 269. Plaintiff re-alleges and incorporate by reference herein all the allegations
15 contained above.

17 270. With respect to the Social Media Market, Facebook has engaged in predatory,
18 exclusionary, and anticompetitive conduct, including but not limited to; (a) obtaining market
19 share through a pattern of deceiving consumers; and (b) exploiting the data it obtained from
20 consumers through deception to systematically destroy competition through its strategy to “copy,
21 kill, or acquire” any and all of its competitors.

271. Facebook's conduct has had an anticompetitive effect in the Social Media Market.

272. Facebook's conduct has no legitimate business purpose or procompetitive effect,
and even if there were, the anticompetitive effects would far outweigh any possible pro-
competitive effects.

27 273. Facebook has engaged in the anticompetitive conduct described herein with the
28 specific intent of monopolizing the Social Media Market.

274. Facebook has engaged in the anticompetitive conduct described herein with a dangerous probability of monopolizing the Social Media Market.

^{275.} Facebook's conduct has had a substantial effect on interstate commerce.

276. Plaintiff and Class members have been, and will continue to be, injured in their property as a result of Facebook's conduct.

277. Plaintiff and Class members have suffered, and will continue to suffer, injury of the type that the antitrust laws were intended to prevent, including but not limited to: (a) lower compensation for their time and attention; (b) a reduction in consumer choice; and (c) being forced to accept a service of lesser quality because of reduced competition.

278. Plaintiff and Class members seek an award of treble damages or, in the alternative, disgorgement of Facebook’s ill-gotten gains. Plaintiff also seeks appropriate equitable relief to enjoin Facebook from continuing to engage in anticompetitive behavior to the detriment of consumers and to remedy the harms that Facebook’s attempted monopolization of the Social Media Market has caused, including: (a) divestment of assets that would continue to entrench its monopoly power; and (b) requiring Facebook to submit to independent monitoring of its user privacy practices, data surveillance, and acquisition conduct.

FIFTH CLAIM FOR RELIEF:

UNJUST ENRICHMENT California Common Law (On behalf of the Class)

279. Plaintiff re-alleges and incorporates by reference herein all the allegations contained above.

280. In the Facebook Terms of Service (“Terms”), each class member and Facebook have agreed “that the laws of the State of California will govern these Terms and any claim [against Facebook], without regard to conflict of law provisions.”

281. Facebook has been unjustly enriched through its misconduct as alleged herein.

1 282. Plaintiff and Class members conferred direct benefits on Facebook in the forms of
 2 their personal data, time, and attention.

3 283. These benefits are quantifiable in measurable units. Facebook sells access to its
 4 users' data, time, and attention to third parties—including advertisers and app developers—for
 5 discrete money amounts. In 2019, for example, Facebook collected \$70.7 billion in revenue,
 6 almost entirely from allowing companies to serve ads to its users.

7 284. Facebook appreciated and had knowledge of the fact that Plaintiff and Class
 8 members conferred these benefits on it. For example, after Facebook's involvement in the
 9 Cambridge Analytica scandal came to light in March 2018, Facebook founder Mark Zuckerberg
 10 explicitly recognized that Plaintiff and Class members conferred on Facebook the benefit of their
 11 data, stating: "We have a responsibility to protect your data, and if we can't then we don't
 12 deserve to serve you." Moreover, in 2018 Facebook earned an average of roughly \$110 in ad
 13 revenue per American user. This calculation, however, ignores what it costs to collect, analyze,
 14 and market user data. According to the balance sheet on file with the SEC, Facebook earned
 15 \$55.8 billion worldwide in 2018, virtually all of it from targeted advertising. Facebook also
 16 reported that relevant costs came to \$20.6 billion. That implies that the value of its users'
 17 personal information was equivalent to \$35.2 billion, or 63 percent of Facebook's earnings..

20 285. Facebook acquired these benefits from Plaintiff and Class members through
 21 misrepresentations and deception. Facebook induced Plaintiff and Class members to join
 22 Facebook based on the promise of stringent privacy protections. All the while, Facebook
 23 concealed the scope of the data it harvested from Plaintiff and Class members and brokered to
 24 third parties. Nor did Facebook reveal the manner in which it weaponized Plaintiff's and Class
 25 members' data to "copy, kill, or acquire" Facebook's rivals.

286. As a result of Facebook's receipt of the direct benefits of Plaintiff's and Class members' data, time, and attention, Facebook was able to destroy competition, enriching itself at the expense of Plaintiff and Class members. Although Plaintiff and Class member conferred on Facebook the direct benefits of their data, time, and attention, Plaintiff and Class members have been, as a result of Facebook's misconduct: (a) deprived of a marketplace that adequately compensates them for their data, time, and attention with benefits of reciprocal value; (b) forced to accept Facebook's services, which are of inferior quality, with no meaningful alternative.

287. Facebook has unjustly reaped monstrous financial gain as a result of the misconduct alleged herein. In 2019, for example, Facebook collected \$70.7 billion in revenue, almost entirely from allowing companies to serve ads to its users. It would be unfair, unscrupulous, unjust, and inequitable to allow Facebook to retain the value it derived from the direct benefits that Plaintiff and Class members conferred upon it.

288. To the extent that it is required—and solely in the alternative—Plaintiff and Class members have no other adequate remedy at law available.

289. Plaintiff and Class members in all of the 50 States and the District of Columbia accordingly seek disgorgement of all of Facebook's profits resulting from the wanton misconduct alleged herein.

SIXTH CLAIM FOR RELIEF

**VIOLATION OF THE UNFAIR COMPETITION ACT
(Cal. Bus. & Prof. Code §§ 17200, *et seq.*)**

290. Plaintiff re-alleges and incorporates by reference herein all the allegations contained above.

291. Plaintiff brings this claim on her own behalf and on behalf of each member of the proposed nationwide California-law class described above.

292. California's Unfair Competition Law (UCL) defines "unfair competition" to include any "unlawful, unfair, or fraudulent" business act or practice. CAL. BUS. & PROF.

1 CODE §§ 17200 *et seq.* As these are stated in the disjunctive, the UCL sets up three prongs—the
 2 unlawful, unfair, and fraudulent prongs—the violation of any of which constitutes a violation of
 3 the UCL.

4 293. Facebook has engaged in, and continues to engage in, acts of unfair competition
 5 as defined in California’s UCL. More specifically, Facebook, based upon the conduct alleged
 6 herein, has violated the unlawful and unfair prongs of the UCL.

7 294. Not only is there a California choice-of-law provision in Facebook’s Terms of
 8 Service, but also, at all pertinent times, the conduct complained of took place in, and has
 9 emanated from, California.

10 295. Facebook users, including the plaintiff, are individuals who lack sophistication
 11 and power. Facebook users are also consumers.

12 296. Facebook’s acts of unfair competition include its violations of the Sherman Act as
 13 alleged herein. Therefore, Facebook has violated the unlawful prong of the UCL.

14 297. Facebook’s conduct has harmed its users, competition, and the public generally.
 15 Plaintiff and the Class Members give up something of material value when agreeing to
 16 Facebook’s Terms of Service: their personal information and their attention. User information
 17 and attention is then sold in measurable units to advertisers in exchange for money. Consumers
 18 thus give up valuable consideration in using Facebook pursuant to Facebook’s Terms of Service.
 19 As Facebook’s co-founder explained, “[Facebook] is not actually free, and it certainly isn’t
 20 harmless. . . . We pay for Facebook with our data and our attention, and by either measure it
 21 doesn’t come cheap.”

22 298. Facebook’s acts of unfair competition include its violations of the Sherman Act
 23 and the policies underlying it, as alleged herein. More specifically:

(a) The acts or practices alleged in this complaint violate the unfair prong of the UCL because the injuries complained of herein are substantial: Facebook acquired substantial benefits from Plaintiff and Class members through creating monopolization of the social media platforms. Facebook induced Plaintiff and Class members to join Facebook based on the promise of stringent privacy protections. All the while, Facebook concealed the scope of the data it harvested from Plaintiff and Class members and brokered to third parties.

(b) As a result of Facebook's receipt of the direct benefits of Plaintiff's and Class members' data, time, and attention, Plaintiff and Class members have been, as a result of Facebook's misconduct: (a) deprived of a marketplace that adequately compensates them for their data, time, and attention with benefits of reciprocal value; (b) forced to accept Facebook's services, which are of inferior quality, with no meaningful alternative.

(c) Facebook's business practices are also unfair because it offends the nation's antitrust policies as alleged herein. They are immoral, unethical, oppressive, and unscrupulous because they are a function of the abuse of Facebook's market power as alleged herein; and

(d) Facebook's behavior is also unfair because it violates public policy that is tethered to this country's statutory antitrust regulation, as expressed in part in the Sherman Act. In sum, for all or any of these reasons, Facebook has violated the unfair prong of the UCL.

299. Plaintiff and the Class Members are entitled to recover restitution.

300. Plaintiff is still a current user of Facebook and is also entitled to injunctive relief to prevent Facebook from persisting in its unlawful, inequitable, and unjustified behavior to her and the Class Members detriment, with such an injunction requiring: (i) Facebook to halt its continuing wrongful acts described herein; (ii) Facebook to engage third-party auditors to conduct audits and evaluations of Facebook’s data privacy practices, commercial surveillance, and acquisition

1 conduct, and ordering them to promptly correct any problems or issues detected by these auditors,
 2 and (iii) Facebook to divest assets, such as WhatsApp, Instagram, and its Onavo technology, that
 3 tend to substantially entrench Facebook's monopoly power in a timely and complete manner. *See,*
 4 *e.g.*, Cal. Bus. & Prof. Code § 17203.

5 **SEVENTH CLAIM FOR RELIEF**
 6 **VIOLATION OF THE CARTWRIGHT ACT**

7 (Cal. Bus & Prof. Code 16700 *et seq.*)

8 301. Plaintiff re-alleges and incorporates by reference herein all the allegations
 9 contained above.

10 302. Throughout the Class Period, Facebook engaged in systematic and continuous
 11 conduct with the purpose of (i) unreasonably restricting trade and commerce, and (ii) excluding
 12 potential competitors from the Social Network Market. Facebook achieved these anticompetitive
 13 purposes by excluding or acquiring any potential competitors to Facebook's business.
 14 Facebook's conduct violated California Business and Professions Code §§ 16700 *et seq.* (the
 15 "Cartwright Act").

17 303. The Cartwright Act applies to the anticompetitive, price-fixing, trade-restraining
 18 conduct of a single firm in certain circumstances where a trader uses coercive tactics to impose
 19 restraints on uncooperative businesses.

20 304. Facebook's actions alleged herein, individually and collectively, were unlawful
 21 combinations within the meaning of the Cartwright Act. The effect of these unlawful
 22 combinations was to exclude competitors from the Social Media market, reinforce and grow
 23 Facebook's dominance and ability to extract anticompetitive profits (a perpetual cycle that will
 24 continue unless Facebook is enjoined), and – fundamental to this action – cause their dominance
 25 of the Social Media market.

1 305. At all relevant times, Facebook intended to form and formed one or more trusts
2 through a combination or conspiracy to accomplish purposes prohibited by and contrary to the
3 public policy of the State of California.

4 306. Facebook's actions constitute prohibited restraints on competition in violation of
5 Business and Professions Code §§ 16720 *et seq.*

307. Facebook willfully acquired and maintained monopoly power in the relevant
Social Network Market, which violates Business and Professions Code § 16727, which makes it
unlawful for “any person to lease or make a sale or contract for the sale of . . . commodities . . .
or to fix a price charged therefor, or discount from, or rebate upon, such price, on the condition,
agreement or understanding that the lessee or purchaser thereof shall not use or deal in the goods,
merchandise, machinery, supplies, commodities, or services of a competitor or competitors of the
lessor or seller, where the effect . . . may be to substantially lessen competition or tend to create a
monopoly in any line of trade or commerce in any section of the State.”

16 308. As a direct result of Facebook's unlawful conduct, Plaintiffs and the Class
17 members were injured due to Facebook's maintenance of a Social Network Market monopoly.

18 309. Plaintiffs and other Class members are “persons” within the meaning of the
19 Cartwright Act as defined in California Business and Professions Code § 16702.

²⁰ ¶ 310. Facebook's conduct violates the Cartwright Act.

311. These violations are continuing and will continue unless enjoined by the Court.

PRAYER FOR RELIEF

24 WHEREFORE, Plaintiff Banks Kupcho, on behalf of herself and the Classes, seek the
25 following relief:

1 a) An order certifying this action as a class action under Fed. R. Civ. 23, defining the
2 Classes as requested herein, finding that Plaintiff are proper representatives of the Classes
3 requested herein, and appointing Plaintiff's counsel as Class Counsel.

4 b) Injunctive and other equitable relief as is necessary to protect the interests of the
5 Classes, including: (i) an order prohibiting Facebook from continuing to engage in the wrongful
6 acts described herein; (ii) requiring Facebook to engage third-party auditors to conduct audits and
7 evaluations of Facebook's data privacy practices, commercial surveillance, and acquisition
8 conduct, and ordering them to promptly correct any problems or issues detected by these auditors,
9 and (iii) requiring Facebook to divest assets, such as WhatsApp, Instagram, and its Onavo
10 technology, that tend to substantially entrench Facebook's monopoly power in a timely and
11 complete manner.

12 c) Treble damages or, alternatively, restitution and/or disgorgement of all amounts
13 wrongfully charged to and received from Plaintiff and members of Classes.

14 d) Attorneys' fees, statutory costs and other costs of suit herein incurred, for both pre-
15 and post-judgment interest on any amounts awarded, for corrective advertising to ameliorate
16 consumers' mistaken impressions created by Facebook's anticompetitive conduct.

17 e) Declaratory relief, including but not limited to a declaration and judgment that
18 Facebook's conduct as alleged herein violates the laws alleged herein.

19 f) Such other relief as the Court may deem just and proper.

20 **JURY DEMAND**

21 Plaintiff hereby demands a trial by jury on all issues so triable.
